### **Important Safeguards**

Please read all of these instructions carefully before you use the device. Save this manual for future reference.

#### What the warranty does not cover

- Any product, on which the serial number has been defaced, modified or removed.
- Damage, deterioration or malfunction resulting from:
  - □ Accident, misuse, neglect, fire, water, lightning, or other acts of nature, unauthorized product modification, or failure to follow instructions supplied with the product.
  - □ Repair or attempted repair by anyone not authorized by us.
  - □ Any damage of the product due to shipment.
  - □ Removal or installation of the product.
  - □ Causes external to the product, such as electric power fluctuation or failure.
  - □ Use of supplies or parts not meeting our specifications.
  - □ Normal wear and tear.
  - □ Any other causes which does not relate to a product defect.
- Removal, installation, and set-up service charges.

### **Regulatory Notice**

#### Legal Information

#### First English printing, October 2002

Information in this document has been carefully checked for accuracy; however, no guarantee is given to the correctness of the contents. The information in this document is subject to change without notice. We are not liable for any injury or loss that results from the use of this equipment.

#### **Safety Instructions**

- Unplug equipment before cleaning. Don't use liquid or spray detergent; use a moist cloth.
- Keep equipment away from excessive humidity and heat. Preferably, keep it in an air-conditioned environment with temperatures not exceeding 40° Celsius (104° Fahrenheit).
- When installing, place the equipment on a sturdy, level surface to prevent it from accidentally falling and causing damage to other equipment or injury to persons nearby.
- When the drawer is in an open position, do not cover, block or in any way obstruct the gap between it and the power supply. Proper air convection is necessary to keep it from overheating.
- Arrange the equipment's power cord in such a way that others won't trip or fall over it.
- If you are using a power cord that didn't ship with the equipment, ensure that it is rated for the voltage and current labeled on the equipment's electrical ratings label. The voltage rating on the cord should be higher than the one listed on the equipment's ratings label.
- Observe all precautions and warnings attached to the equipment.
- If you don't intend on using the equipment for a long time, disconnect it from the power outlet to prevent being damaged by transient over-voltage.
- Keep all liquids away from the equipment to minimize the risk of accidental spillage. Liquid spilled on to the power supply or on other hardware may cause damage, fire or electrical shock.
- Only qualified service personnel should open the chassis. Opening it yourself could damage the equipment and invalidate its warranty.
- If any part of the equipment becomes damaged or stops functioning, have it checked by qualified service personnel.

#### **Regulatory Notices Federal Communications Commission (FCC)**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

Any changes or modifications made to this equipment may void the user's authority to operate this equipment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Re-position or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

# Preface

### About this manual

This manual is designed for **RaidStorage RAG361** user to operate the disk array system as easy as possible. Information contained in this manual has been checked for accuracy, but no product warranty is given with this content due to each operation environment is different. Information and specification are subject to change without further notice.

# Chapter 1 RAID introduction

### **1.1 Features**

Our iSCSI IP series controller is a high-performance RAID controller.

- Backplane solution
  - **RAG281** : Gigabit LAN (x2) -to- SATA II (x8 bays) RAID controller.
  - RAG361 : Gigabit LAN (x2) -to- SATA II (x16 bays) RAID controller.
  - RSG361 : Gigabit LAN (x4) -to- SATA II/SAS (x16 bays) RAID controller.

#### Synergy Global Technology, Inc IP series controller features:

- RAID 6 ready.
- Snapshot-on-the-box (ESnap) / rollback. (not supported on E320-IP)
- QCopy remote replication (not supported on E320-IP)
- SATA II support with SATA I backward compatible.
- N-way mirror.
- On-line volume expansion and RAID level migration.
- Global/dedicated cache configuration by volume.
- S.M.A.R.T. enabled.
- Support SES.
- Support Microsoft VDS (Virtual Disk Service).
- Disk roaming.
- MPIO ready (initiator driver support needed).
- MC/S ready (initiator driver support needed).
- Support iSCSI header and data digest.
- Support CHAP authentication.
- Support Link Aggregation/Trunking.

With proper configuration, **RSG281/361** controller can provide non-stop service with a high degree of fault tolerance by the use of **Our iSCSI** RAID technology and advanced array management features. The controller features are slightly different between the backplane solution and cable solution.

**IP series** controller connects to the host system in iSCSI interface. It can be configured to any RAID level. IP series controller provides reliable data protection for servers and the **RAID 6** function ready. The RAID 6 function allows two HDD failures without any impact on the existing data. Data can be recovered from the

remaining data and parity drives. (Data can be recovered from the rest disks/drives.)

**Snapshot-on-the-box (ESnap)** is a fully usable copy of a defined collection of data that contains an image of the data as it appeared at the point in time, which means a point-in-time data replication. It provides consistent and instant copies of data volumes without any system downtime. Snapshot-on-the-box (ESnap) can keep up to 32 snapshots (ESnap) for all data volumes. **Rollback** feature is provided for restoring the previously-snapshot (ESnap) data easily while continuously using the volume for further data access. The data access is regular as usual including read/write without any impact to end users. The "on-the-box" terminology implies that it does not require any proprietary agents installed at host side. The snapshot (ESnap) is taken at target side and done by **Enhance Tech IP** controller. It will not consume any host CPU time thus the server is dedicated to the specific or other application. The snapshot (ESnap) copies can be taken manually or by schedule every hour or every day, depends on the modification.

**QCopy** service is to build a proprietary replication mechanism for created UDVs. It will copy the logical user volume data exactly to the remote place. The QCopy is built-in service without any host-based application for the data replication and it has easy configuration setup from the Web GUI.

**Enhance Tech** RAID controller is the most cost-effective disk array controller with completely integrated high-performance and data-protection capabilities which meet or exceed the highest industry standards, and **the best data solution for small/medium business (SMB) users.** 

#### Caution

Snapshot (ESnap) / rollback features need **512MB** RAM or more. Please refer to RAM certification list in Appendix A for more detail.

# 1.2 Terminology

The document uses the following terms:

RAID	RAID is the abbreviation of " <b>R</b> edundant <b>A</b> rray of <b>I</b> ndependent
	Disks". There are different RAID levels with different degree
	of the data protection, data availability, performance to host
	environment.

PD	The <b>P</b> hysical <b>D</b> isk belongs to the member disk of one specific volume group.		
VG	<b>V</b> olume <b>G</b> roup. A collection of removable media. One VG consists of a set of UDVs and owns one RAID level attribute.		
UDV	<b>U</b> ser <b>D</b> ata <b>V</b> olume. Each VG could be divided into several UDVs. The UDVs from one VG share the same RAID level, but may have different volume capacity.		
CV	<b>C</b> ache Volume. The RAID controller uses the on board memory as cache. All RAM (except for the part which is occupied by the controller) can be used as cache. User can divide the cache for one UDV or sharing among all UDVs. Each UDV will be associated with one CV for data transaction. Each CV could be assigned different cache memory size.		
LUN	Logical Unit Number. A logical unit number (LUN) is an unique identifier used on a iSCSI connection which enables it to differentiate among separate devices (each of which is a logical unit).		
GUI	Graphic User Interface.		
RAID width, RAID copy, RAID row (RAID cell in one row)	<ul> <li>RAID width, copy and row are used to describe one VG.</li> <li>E.g.: <ol> <li>One 4-disk RAID 0 volume: RAID width= 4; RAID copy=1; RAID row=1.</li> <li>One 3-way mirroring volume: RAID width=1; RAID copy=3; RAID row=1.</li> <li>One RAID 10 volume over 3 4-disk RAID 1 volume: RAID width=1; RAID copy=4; RAID row=3.</li> </ol> </li> <li>Write-Through cache write policy. A caching technique in</li> </ul>		
	which the completion of a write request is not signaled until data is safely stored on non-volatile media. Each data is synchronized in both data cache and the accessed physical disks.		
WB	Write-Back cache write policy. A caching technique in which the completion of a write request is signaled as soon as the data is in cache and actual writing to non-volatile media occurs at a later time. It speeds up system write performance		

	but needs to bear the risk where data may be inconsistent between data cache and the physical disks in one short time interval.	
RO	Set the volume to be <b>R</b> ead- <b>O</b> nly.	
DS	<b>D</b> edicated <b>S</b> pare disks. The spare disks are only used by one specific VG. Others could not use these dedicated spare disks for any rebuilding purpose.	
GS	<b>G</b> lobal <b>S</b> pare disks. GS is shared for rebuilding purpose. If some VGs need to use the global spare disks for rebuilding, they could get the spare disks out from the common spare disks pool for such requirement.	
DC	Dedicated Cache.	
GC	Global Cache.	
DG	<b>D</b> e <b>G</b> raded mode. Not all of the array's member disks are functioning, but the array is able to respond to application read and write requests to its virtual disks.	
S.M.A.R.T.	Self-Monitoring Analysis and Reporting Technology.	
WWN	World Wide Name.	
НВА	Host Bus Adapter.	
ΜΡΙΟ	Multi-Path Input/Output.	
MC/S	Multiple Connections per Session	
S.E.S	SCSI Enclosure Services.	
NIC	Network Interface Card.	
iSCSI	Internet Small Computer Systems Interface.	
	Link Aggregation Control Protocol.	
LACP		
MTU	Maximum Transmission Unit.	

	system over the iSCSI data ports.	
iSNS	Internet Storage Name Service.	
SAS	Serial Attached SCSI.	

### 1.3 RAID levels

RAID 0	Disk striping. RAID 0 needs at least one hard drive.	
RAID 1	Disk mirroring over two disks. RAID 1 needs at least two hard drives.	
N-way mirror	Extension to RAID 1 level. It has N copies of the disk.	
RAID 3	Striping with parity on the dedicated disk. RAID 3 needs at least three hard drives.	
RAID 5	Striping with interspersed parity over the member disks. RAID 3 needs at least three hard drives.	
RAID 6	2-dimensional parity protection over the member disks. RAID 6 needs at least four hard drives.	
RAID 0+1	Mirroring of the member RAID 0 volumes. RAID 0+1 needs at least four hard drives.	
RAID 10	Striping over the member RAID 1 volumes. RAID 10 needs at least four hard drives.	
RAID 30	Striping over the member RAID 3 volumes. RAID 30 needs at least six hard drives.	
RAID 50	Striping over the member RAID 5 volumes. RAID 50 needs at least six hard drives.	
RAID 60	Striping over the member RAID 6 volumes. RAID 60 needs at least eight hard drives.	
JBOD	The abbreviation of " <b>J</b> ust a <b>B</b> unch <b>O</b> f <b>D</b> isks". JBOD needs at least one hard drive.	

# **Chapter 2 Getting started**

### 2.1 Before starting

Before starting, prepare the following items.

- 1. Check the **"Certification list"** in Appendix A to confirm the hardware setting is fully supported.
- 2. Read the latest release notes before upgrading. Release notes accompany with release firmware.
- 3. A server with a NIC or iSCSI HBA.
- 4. CAT 5e, or CAT 6 network cables for management port and iSCSI data ports. Recommend CAT 6 cables for best performance.
- 5. Prepare storage system configuration plan.
- 6. Management and iSCSI data ports network information. When using static IP, please prepare static IP addresses, subnet mask, and default gateway.
- 7. Gigabit LAN switches. (Recommended) or Gigabit LAN switches with VLAN/LCAP/Trunking functions. (Optional)
- 8. CHAP security information, including CHAP usernames and secrets. (Optional)
- 9. Setup the hardware connection before power up servers and THE controllers. Connect console cable, management port cable, and iSCSI data port cables first.

## 2.2 iSCSI introduction

iSCSI (Internet SCSI) is a protocol which encapsulates SCSI (Small Computer System Interface) commands and data in TCP/IP packets for linking storage devices with servers over common IP infrastructures. iSCSI provides high performance SANs over standard IP networks like LAN, WAN or the Internet.

IP SANs are true SANs (Storage Area Networks) which allow few of servers to attach to an infinite number of storage volumes by using iSCSI over TCP/IP networks. IP SANs can scale the storage capacity with any type and brand of storage system. In addition, using any type of network (Ethernet, Fast Ethernet, Gigabit Ethernet) and combining operating systems (Microsoft Windows, Linux, Solaris, ...etc.) within the SAN network. IP-SANs also include mechanisms for security, data replication, multi-path and high availability.

Storage protocol, such as iSCSI, has "two ends" in the connection. These ends are the initiator and the target. In iSCSI we call them iSCSI initiator and iSCSI target. The iSCSI initiator requests or initiates any iSCSI communication. It requests all SCSI operations like read or write. An initiator is usually located on the host/server side (either an iSCSI HBA or iSCSI SW initiator).

The iSCSI target is the storage device itself or an appliance which controls and serves volumes or virtual volumes. The target is the device which performs SCSI commands or bridges it to an attached storage device. iSCSI targets can be disks, tapes, RAID arrays, tape libraries, and etc.

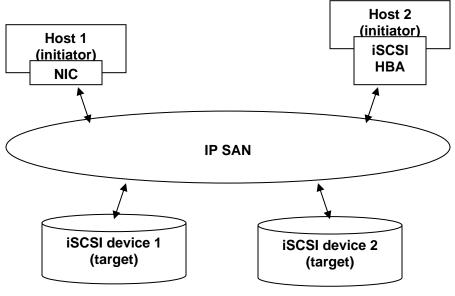

Figure 2.2.1

The host side needs an iSCSI initiator. The initiator is a driver which handles the SCSI traffic over iSCSI. The initiator can be software or hardware (HBA). Please refer to the certification list of iSCSI HBA(s) in Appendix A. OS native initiators or other software initiators use the standard TCP/IP stack and Ethernet hardware, while iSCSI HBA(s) use their own iSCSI and TCP/IP stacks on board.

Hardware iSCSI HBA(s) would provide its initiator tool. Please refer to the vendors' HBA user manual. **Microsoft**, **Linux** and **Mac** provide software iSCSI initiator driver. Below are the available links:

1. Link to download the Microsoft iSCSI software initiator: <u>http://www.microsoft.com/downloads/details.aspx?FamilyID=12cb3c1a-15d6-4585-b385-befd1319f825&DisplayLang=en</u>

Please refer to Appendix D for Microsoft iSCSI initiator installation procedure.

 Linux iSCSI initiator is also available. For different kernels, there are different iSCSI drivers. Please check Appendix A for software iSCSI initiator certification list. If user needs the latest Linux iSCSI initiator, please visit Open-iSCSI project for most update information. LinuxiSCSI (sfnet) and Open-iSCSI projects merged in April 11, 2005.

Open-iSCSI website: http://www.open-iscsi.org/ Open-iSCSI README: http://www.open-iscsi.org/docs/README Features: http://www.open-iscsi.org/cgi-bin/wiki.pl/Roadmap Support Kernels: http://www.open-iscsi.org/cgi-bin/wiki.pl/Supported\_Kernels Google groups: http://groups.google.com/group/open-iscsi/threads?gvc=2 http://groups.google.com/group/open-iscsi/topics Open-iSCSI Wiki: http://www.open-iscsi.org/cgi-bin/wiki.pl

 ATTO iSCSI initiator is available for Mac. Website: <u>http://www.attotech.com/xtend.html</u>

## 2.3 Management methods

There are three management methods to manage **P Series** controller, describe in the following:

### 2.3.1 Web GUI

**IP Series** controllers support graphic user interface to manage the system. Be sure to connect LAN cable. The default setting of management port IP is DHCP and the DHCP address displays on LCM; user can check LCM for the IP first, then open the browser and type the DHCP address: (The DHCP address is dynamic and user may need to check every time after reboot again.) When DHCP service is not available, IP series controllers use zero config (Zeroconf) to get an IP address.

E.g., on LCM.

192.168.0.200	
UltraStor RS8	$\leftarrow$

http://192.168.0.200

or https://192.168.0.200 (https: connection with encrypted Secure Sockets Layer (SSL). Please be aware of the https function is slower than http.) (https is not supported on E320-IP.)

Click any function at the first time; it will pop up a dialog to authenticate current user.

Login name: **admin** Default password: **1234** 

Or login with the read-only account which only allows seeing the configuration and cannot change setting.

Login name: **user** Default password: **1234** 

### 2.3.2 Console serial port

Use NULL modem cable to connect console port. The console setting is baud rate: **115200**, 8 bits, 1 stop bit, and no parity. Terminal type: **vt100** Login name: **admin** Default password: **1234** 

### 2.3.3 Remote control – secure shell

SSH (secure shell) is required for **P Series** controllers to remote login. The SSH client software is available at the following web site: SSHWinClient WWW: <u>http://www.ssh.com/</u> Putty WWW: <u>http://www.chiark.greenend.org.uk/</u>

Host name: **192.168.0.200 (Please check your DHCP address for this field.)** Login name: **admin** Default password: **1234** 

**Tips** Enhance Tech IP / IP-4 Series controller support SSH for remote control. For using SSH, the IP address and the password is required for login.

# 2.4 Enclosure

### 2.4.1 LCM

There are four buttons to control theLCM (LCD Control Module), including: ▲ (up), ▼ (down), **ESC** (Escape), and **ENT** (Enter).

After booting up the system, the following screen shows management port IP and model name:

192.168.0.200 UltraStor RS8 ←

Press "ENT", the LCM functions "Alarm Mute", "Reset/Shutdown", "Quick Install", "View IP Setting", "Change IP Config" and "Reset to Default" will rotate by pressing  $\blacktriangle$  (up) and  $\blacktriangledown$  (down).

When there is WARNING or ERROR level of event happening, the LCM shows the event log to give users more detail from front panel too.

The following table is function description.

Alarm Mute	Mute alarm when error occurs.	
Reset/Shutdown	Reset or shutdown controller.	
Quick Install	Quick three steps to create a volume. Please refer to section 3.3 for operation in web UI.	
View IP Setting	Display current IP address, subnet mask, and gateway.	
Change IP Config	Set IP address, subnet mask, and gateway. There are 2 selections, DHCP (Get IP address from DHCP server) or set static IP.	
Reset to Default	Reset to default sets password to default: <b>1234</b> , and set IP address to default as DHCP setting.	
	Default IP address: 192.168.0.200	
	Default subnet mask: 255.255.255.0	
	Default gateway: 192.168.0.1	

The following is LCM menu hierarchy.

Enhance	[Alarm Mute]	[▲Yes No▼]		
Technology	[Reset/Shutdown]	[Reset]	[▲Yes No▼]	
▲ ▼		[Shutdown]	[▲Yes No▼]	
	[Quick Install]	RAID 0	Volume Size	Adjust Volume
		(RAID 1/RAID 3/	(xxxxxx G)	Size

		RAID 5/RAID 6) xxxxxx GB	Apply The Config	[▲Yes No▼]
		[IP Config] [Static IP]		
	Niow ID Sotting]	[IP Address] [192.168.010.050]		
	[View IP Setting]	[IP Subnet Mask] [255.255.255.0]		
		[IP Gateway] [192.168.010.254]		
		[DHCP]	[▲Yes No▼]	
	[Change IP Config]		[IP Address]	Adjust IP address
		[Statia ID]	[IP Subnet Mask]	Adjust Submask IP
		[Static IP]	[IP Gateway]	Adjust Gateway IP
			[Apply IP Setting]	[▲Yes No▼]
	[Reset to Default]	[▲Yes No▼]		

Caution

Before power off, it is better to execute **"Shutdown"** to flush the data from cache to physical disks.

### 2.4.2 System buzzer

The system buzzer features are describing in the following:

- 1. The system buzzer alarms 1 second when system boots up successfully.
- 2. The system buzzer alarms continuously when there is error level event happened. The alarm will be stopped after mute.
- 3. The alarm will be muted automatically when the error situation is resolved. E.g., when RAID 5 is degraded and alarm rings immediately, after user changes/adds one physical disk for rebuilding, and when the rebuilding is done, the alarm will be muted automatically.

### 2.4.3 LED

The LED features are describing as follows:

- 1. **Marquee/Disk Status/Disk Rebuilding LED**: The Marquee/Disk Status/Disk Rebuilding LEDs are displayed in the same LEDs. The LEDs behave for different functions in different stages.
  - I. **Marquee LEDs**: When system powers on and succeeds to boot up, the Marquee LED acts until the system is booting successful.
  - II. **Disk status LEDs**: the LEDs reflect the disk status for the tray. Only On/Off situation.
  - III. **Disk rebuilding LEDs**: the LEDs are blinking when the disks are under rebuilding.
- 2. Disk Access LED: Hardware activated LED when accessing disks (IO).
- 3. **Disk Power LED**: Hardware activated LED when the disks are plugged in and powered.
- 4. **System status LED**: Used to reflect the system status by turn on the LED when error occurs or RAID malfunctioning happens.
- 5. **Management LAN port LED**: GREEN LED is for LAN transmit/receive indication. ORANGE LED is for LAN port 10/100 LINK indication.
- 6. **BUSY LED**: Hardware activated LED when the front-end channel is busy.
- 7. **POWER LED**: Hardware activated LED when system is powered on.

# **Chapter 3 Web GUI guideline**

## 3.1 IP-series GUI hierarchy

The below table is the hierarchy of IP-series GUI.

Quick Install	→	Step 1 / Step 2 / Step 3 / Confirm
System Config		
System name	$\rightarrow$	System name
IP address	$\rightarrow$	DHCP / Static / Address / Mask / Gateway / DNS /
	、	HTTP port / HTTPS port / SSH port
		Auto logout / Login lock
		Old password / Password / Confirm
		Time zone / Date / Time / NTP Server
		Mail-from address / Mail-to address / Sent events / SMTP relay / SMTP server / Authentication / Account / Password / Confirm / Send test mail
		SNMP trap address / Community / Send events
•		Messenger IP/hostname / Send events
	$\rightarrow$	Server IP/hostname / Port / Facility / Event level
server	_	Filter / Download / Muta / Claar
	7	Filter / Download / Mute / Clear
iSCSI config	、	
		Entity name / iSNS IP
NIC	7	Aggregation / IP settings for iSCSI ports / Become default gateway / Set MTU
Node	→	(IP-4 series) User / Create / Delete / Rename /
		Change Authentication
		(IP series) Change Authentication
Session		
CHAP account	→	(IP-4 series) Create / Delete / Modify user information (IP series) Create /Delete
Volumo config		(IF Selles) Cleate (Delete
Volume config	<b>→</b>	Free disks / Global spares / Dedicated spares / More
i ilysical disk		information / Auto Spindown
Volume group	$\rightarrow$	Create / Delete / More information / Rename / Migrate
User data	$\rightarrow$	Attach / Snapshot / Create / Delete / More information
Volume		/ Rename / Extend / Set read/write mode / Set priority
Cacho volumo	<b>د</b>	/ Resize Snapshot space / Auto Snapshot Create / Delete / More information / Resize
		Attach / Detach
Enclosure management	د	Enable / Disable
0		Enable / Disable Auto shutdown
monitor

Maintenance		
	Upgrade →	Browse the firmware to upgrade / Export config
	Info →	<ul> <li>System information</li> </ul>
	Reset to default →	Sure to reset to factory default?
	Config import & →	<ul> <li>Import/Export / Import file</li> </ul>
	export	
	Shutdown →	Reboot / Shutdown
Logout		Sure to logout?

## 3.2 Login

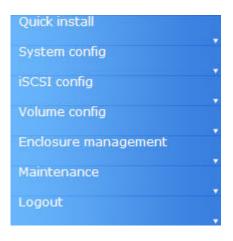

**IP series** controller supports graphic user interface (GUI) to operate the system. Be sure to connect the LAN cable. The default IP setting is **STATIC**; open the browser and enter:

#### http://192.168.0.200 (Please check the DHCP address first on LCM)

Click any function at the first time; it will pop up a dialog for authentication.

Login name: **admin** Default password: **1234** 

After login, you can choose the function blocks on the left side of window to do configuration.

There are six indicators at the top-right corner for backplane solutions, and cabling solutions have three indicators at the top-right corner.

- 1. **RAID light:** Green means RAID works well. Red represents RAID failure happening.
- 2. **Temperature light:** Green is normal. Red represents abnormal temperature.
- 3. **Voltage light:** Green is normal. Red represents abnormal voltage status.
- 4. **UPS light:** Green is normal. Red represents abnormal UPS status.
- 5. **Fan light:** Green is normal. Red represents abnormal fan status. (Only for backplane solution)
- 6. **Power light:** Green is normal. Red represents abnormal power status. **(Only for backplane solution)**

### 3.3 Quick install

It is easy to use "Quick install" function to create a volume. Depend on how many physical disks or how many residual spaces on created VGs are free, the system will calculate maximum spaces on RAID levels 0/1/3/5/6. "Quick install" function will occupy all residual VG space for one UDV, and it has no space for snapshot (ESnap) and spare. If snapshot (ESnap) function is needed, please create volumes by manual, and refer to section 4.4 for more detail.

**Quick Install** function has a smarter policy. When the system is full inserted with 8 HDD or 16 HDD, and all HDD are in the same size, **Quick Install** function lists all possibilities and sizes among different RAID levels, **Quick Install** will use all available HDD for the RAID level which user decides. But, when the system is inserted with different sizes of HDD, e.g., 8\*200G HDD and 8\*80G, The controller also lists all possibilities and combinations of different RAID Level and different sizes. After user chooses RAID level, user may finds there are still some HDD

are not used (Free Status). The result is from the smarter policy on **Quick Install** which gives user:

- 1. Biggest capacity of RAID level which user chooses and,
- 2. The fewest disk number for the RAID level/volume size.

E.g., user chooses RAID 5 and the controller has 12\*200G HDD + 4\*80HDD inserted. Then if using all 16 HDD for a RAID 5, then the volume max size is 1200G (80G\*15). But in controller, we do smarter check and find out the most efficient use of HDDs, which results controller only use the 200G HDD (Volume size is 200G\*11=2200G). Then, the volume size is bigger, and full use of HDD capacity.

**Step 1:** Select "**Quick install**" then choose the RAID level to set. Please refer to Figure 3.3.1. After choosing the RAID level, click "<u>Next >> •</u>", which links to another page, user can set up "LUN" here.

Figure 3.3.1

**Step 2:** Please select a LUN number. Access control of host would show as a wildcard "\*", which means every host can access this volume. In this page, the "Volume size" can be changed. The maximum volume size is shown. To re-enter the size be sure it has to be less or equal to maximum volume size. Then click

**Step 3:** Confirm page. Click "<u>Confirm</u>" if all setups are correct. Then a page with the "User data volume" just been created will be shown as Figure 3.3.2.

**Done.** You can start to use the system now.

No.	Name	Size (GB)	Status	1	2	з <mark>R</mark> %	RAID	#LUN	Snapshot (GB)	VG name	C¥ (MB
1	QUICK68809	609	Online	0 WB •	HI O		RAID 0	1	0.00/0.00	QUICK45427	663

(Figure 3.3.2: A RAID 0 user data volume with the UDV name "QUICK68809", named by the system itself, with the total available volume size 609GB.)

### 3.4 System configuration

"System config" selection is for the setup of "System name", "IP address", "Language", "Login config", "Password", "Date", "Mail", "SNMP", "Messenger", "System log server" and view "Event log".

<u>System name</u>	System name for identification
<u>IP address</u>	Internet Protocol(IP) address for remote administration
<u>Language</u>	Language preference for WebUI
<u>Login config</u>	Configuration for auto logout and login lock
Password	Administrator's password
Date	System time for event log
Mail	Alert by e-mail
SNMP	Alert via Simple Network Management Protocol(SNMP)
Messenger	Transmits net send and Alerter service messages between clients and servers
System log server	Alert to remote system log server
<u>Event log</u>	System event log to record critical events

Figure 3.4.1

#### 3.4.1 System name

Select "**System name**" to change system name. Default system name composed by model name and serial number of this system, e.g.: P200C-A00001.

/ System config / System name					
System name :	P200C-A00001				
Figure	Figure 3.4.1.1				

#### 3.4.2 IP address

Select "**IP** address" to change IP address for remote administration usage. There are 2 selections, DHCP (Get IP address from DHCP server) or static IP. The default setting is DHCP enabled. User can change the HTTP, HTTPS, and SSH port number when the default port number is not allowed on host/server.

/ System config / IP add	dress				
OHCP					
O Static					
Address :					
Mask :					
Gateway :					
DNS:					
MAC:	00:13:78:00:00:DB				
HTTP port :	80				
HTTPS port :	443				
SSH port :	22				
Eiguro 2424					

Figure 3.4.2.1

#### 3.4.3 Language

Select **"Language"** is to set the language shown in Web UI. The option "Auto Detect" will be detected by browser language setting.

/ System config / Language	
Language :	Auto Detect 🔽
	English Simplified Chinese

Figure 3.4.3.1

### 3.4.4 Login config

Select "**Login config**" is to set only one admin and set the auto logout timing. The only one admin can prevent multiple users access the same controller in the same time.

- 1. Auto logout: The options are (1) Disable; (2) 5 mins; (3) 30 mins; (4) 1 hour. The system will log out automatically when the user is no response for a period of time.
- 2. Login lock: Disable/Enable. When the login lock is enabled, the system allows only one user to login/modify the system settings.

/ System config / Login config						
Auto logout :	- Disable - 💌					
Login lock :	- Disable - 💌					
	- Disable -					
	- Enable -					

Figure 3.4.4.1

#### 3.4.5 Password

Select **"Password"** is for changing administrator password. The maximum length of admin password is 12 characters.

/ System config / Password				
Old password :				
Password :				
Confirm :				

Figure 3.4.5.1

#### 3.4.6 Date

Select "**Date**" to set up the current date, time, and time zone before using or synchronize time from NTP(Network Time Protocol) server.

/ System config / Date								
Now :	2007/8/1 16:16:18							
Time zone :	Asia/Taipei					•		
Setup date and time	up date and time manually							
Date :	2007		1	8		1	1	
Time :	16	;	15		:	53		
O NTP								
Server :								

Figure 3.4.6.1

#### 3.4.7 Mail

Select "**Mail**" to enter at most 3 mail addresses for receiving the event notification. Some mail servers would check "**Mail-from address**" and need authentication for anti-spam. Please fill the necessary fields and select "**Send test mail**" to check whether the email works fine. User can also select which levels of event logs are needed to be sent out by Mail. Default setting is only ERROR and WARNING event logs enabled.

/ System config / Mail						
Mail-from address :	mailman@controller					
Mail-to address 1 :						
Send events 1 :	INFO 🗆 WARNING 🗹 ERROR 🗹					
Mail-to address 2 :						
Send events 2 :	INFO 🗆 WARNING 🗹 ERROR 🗹					
Mail-to address 3 :						
Send events 3 :	INFO 🗆 WARNING 🗹 ERROR 🗹					
SMTP relay :						
SMTP server :						
Authentication :	None 🔽					
Account :						
Password :						
Confirm :						
Send test mail :						

Figure 3.4.7.1

#### 3.4.8 SNMP

Select "**SNMP**" to set up SNMP trap for alert via SNMP. It allows up to 3 SNMP trap addresses. Default community setting is "public". User can choose the event log levels and the default value of SNMP is INFO event log enabled only.

/ System config / SNMP	
SNMP trap address 1 :	
SNMP trap address 2 :	
SNMP trap address 3 :	
Community :	public
Send events :	INFO 🗹 WARNING 🗖 ERROR 🗖

Figure 3.4.8.1

There are many SNMP tools. The following web sites are for reference:

SNMPc: <u>http://www.snmpc.com/</u> Net-SNMP: <u>http://net-snmp.sourceforge.net/</u>

#### 3.4.9 Messenger

Select "**Messenger**" to set up pop-up message alert via Windows messenger (not MSN). User must enable the service "Messenger" in Windows (Start  $\rightarrow$  Control Panel  $\rightarrow$  Administrative Tools  $\rightarrow$  Services  $\rightarrow$  Messenger), and then event logs can be received. It allows up to 3 messenger addresses. User can choose the event log levels and the default values are WARNING and ERROR event logs enabled only.

/ System config / Messenger	
Messenger IP/hostname 1 :	
Messenger IP/hostname 2 :	
Messenger IP/hostname 3 :	
Send events :	INFO 🗖 WARNING 🗹 ERROR 🗹

Figure 3.4.9.1

#### 3.4.10 System log server

Select **"System log server"** to set up alert via syslog protocol. The default port of syslog is 514. User can choose the facility and the event log level. The default values of event level are INFO, WARNING and ERROR event logs enabled.

/ System config / System log server				
Server IP/hostname :				
Port :	514			
Facility :	Local4 💌			
Event level :	INFO 🗹 WAI	RNING 🗹 E	RROR 🗹	

Figure 3.4.10.1

There are some syslog server tools. The following web sites are for reference: WinSyslog: <u>http://www.winsyslog.com/</u>

Kiwi Syslog Daemon: <u>http://www.kiwisyslog.com/</u> Most UNIX systems build in syslog daemon.

### 3.4.11 Event log

Select "**Event log**" to view the event messages. Press "**Filter**" button to choose the display. Press "**Download**" button will save the whole event log as text file with file name "log-ModelName-SerialNumber-Date-Time.txt" (e.g., log-P200C-A00001-20070801-120000.txt). Press "**Clear**" button will clear event log. Press "**Mute**" button will stop alarm if system alerts.

Filter •	Download •	Mute 🔹	Clear •
INFO:Wed, 08 Aug 2007 18:04:25 CST UDV QUICK68809 has been created. INFO:Wed, 08 Aug 2007 18:04:25 CST			
VG QUICK45427 has been created.			
INFO:Wed, 08 Aug 2007 18:01:17 CST admin login from 192.168.10.121 via Web UI			
	Eiguro 2 / 11 1		

Figure 3.4.11.1

For customizing your own display of event logs, there are total three display methods, on Web UI/Console event log page, popup windows on Web UI, and on LCM. The default setting of these three displays is WARNING and ERROR event logs enabled on Web UI and LCM. The popup is default disabled.

Show events : Pop up events : Show on LCM :	INFO 🗖 INFO 🗖 INFO 🗖	WARNING 🗹 WARNING 🗖 WARNING 🗹		ERRC ERRC ERRC	R 🗆		
			<< Back	0		Confirm	

#### Figure 3.4.11.2

The event log is displayed in reverse order which means the latest event log is on the first page. The event logs are actually saved in the first four hard drives; each hard drive has one copy of event log. For one controller, there are four copies of event logs to guarantee users can check event log most of the time when there is/are failed disk(s).

Tips

Please plug-in anyone of first four hard drives, and then event logs can be saved and appeared in next system boot up. Otherwise, event logs would be gone.

# 3.5 iSCSI config

"iSCSI config" selection is for the setup of "Entity Property", "NIC", "Node", "Session", and "CHAP account".

Entity property	iSCSI entity property
NIC	iSCSI portal configuration
Node	iSCSI node configuration
Session	iSCSI session information
<u>CHAP account</u>	Add/Remove account for iSCSI node

Figure 3.5.1

### 3.5.1 Entity property

Select "Entity property" to view the view the entity name of the controller, and setup "**iSNS IP**" for iSNS (Internet Storage Name Service). Add an iSNS server IP address to the iSNS servers list which the iSCSI initiator service can send queries. The entity name of **RSG281/361** can be changed, but **RAG281/361** can not.

/ iSCSI config / E	ntity property		0	0		<b>)</b> (	3
Entity name : iSNS IP :	iqn.1997-10.com.enhance-te	ech:ultrastorrs	16i4-	-000a	a6d020		
					Confirm		0

Figure 3.5.1.1

### 3.5.2 NIC

Select "NIC" to change IP addresses of iSCSI data ports. **RSG281/361** has 4 gigabit LAN ports to transmit data, but RS8 IP/RS16 IP have two ports. Each of them must be assigned to one IP address in multi-homed mode unless the link aggregation or trunking mode has been selected. If any two or more ports are set

in link aggregation or trunking mode, they will combine to one line displayed in the screen.

								Aggregat	ion •
Name	LAG	LAG No	DHCP	IP address	Netmask	Gateway	MTU	MAC address	Link

Mask :						
Gateway :						
NIC:						

Figure 3.5.2.6

(Figure 3.5.2.6: RAG281/361, there are 2 x iSCSI data ports, select two NICs for link aggregate.)

Name	LAG	LAG No	DHCP	IP address	Netmask	Gateway	MTU	MAC address	Link
LAN1	Trunking	ο	no •	192.168.1.1	255.255.255.0	192.168.1.254	1500	00:13:78:a6:00:60	down
LAN2	Trunking	Ο	no •	192.168.1.1	255.255.255.0	192.168.1.254	1500	00:13:78:a6:00:60	down
LAN3	LACP	1	no •	192.168.3.1	255.255.255.0	192.168.3.254	1500	00:13:78:a6:00:62	down
LAN4	LACP	1	no •	192.168.3.1	255.255.255.0	192.168.3.254	1500	00:13:78:a6:00:62	down

(Figure 3.5.2.7: RSG281/361, LAN1 & LAN2 set as Trunking mode. LAN3 and LAN4 set as LACP mode.)

Take an example of **RSG281/361**, LAN1 & LAN2 set as Trunking mode. LAN3 and LAN4 set as LACP mode. To remove Trunking/LACP setting can click the button " in the "**LAG**" column, and then will pop up a message to confirm.

In**RSG281/361**, Trunking/LACP setting can be changed by clicking the button " • " in the "**Aggregation**" column.

/ iSCSI config / NIC / Aggregation							
Aggregation :	© Multi-homed O Trunking O LACP						

(Figure 3.5.2.7: RSG281/361, select aggregation mode.)

- 1. **Multi-homed**: Default mode. Each of iSCSI data ports is connected by itself and is not link aggregation. Select this mode can remove Trunking/LACP setting.
- 2. **Trunking**: defines the use of multiple iSCSI data ports in parallel to increase the link speed beyond the limits of any one single port.
- 3. **LACP**: The Link Aggregation Control Protocol (LACP) is part of IEEE specification 802.3ad that allows bundling several physical ports together to form a single logical channel. LACP allows a network switch to negotiate an automatic bundle by sending LACP packets to the peer. The advantages of LACP are (1) increases bandwidth. (2) failover when link status fails on a port. For detailed setup steps, please refer to Appendix E: Trunking/LACP setup instructions.

#### Caution

In **RSG281/361**, each of iSCSI data ports must be set in different subnet. The other models do not have such limitation.

#### 3.5.3 Node

#### Single-node / Multi-node:

Select "**Node**" to view the target name for iSCSI initiator. **IP series controller** supports single-node. The node name of **RAG281 / RAG361** exists by default and can not be changed.

/ iSCSI config / E	ntity property		6	0	<ul> <li></li> <li></li> <li></li> </ul>	<b>•</b>	0
Entity name : iSNS IP :	iqn.1997-10.com.enhance-tech:ultr	astorrs16i	p-00	0a20	475		
			_		Confiri		

Figure 3.5.3.1

(Figure 3.5.3.1: RAG281 / RAG361, single-mode.)

**RSG** series controller supports multi-node. There is no default node name on **RSG 281 and RSG361.** It must be created first before it can be used. When using "Quick install" function, a node name will be created automatically.

Name	Auth	Portal

#### Figure 3.5.3.3

#### (Figure 3.5.3.3: RSG281/361, press "Create" to create a node.)

#### CHAP:

**CHAP** is the abbreviation of **C**hallenge **H**andshake **A**uthorization **P**rotocol. CHAP is a strong authentication method used with point-to-point for user login. It's a type of authentication in which the authentication server sends the client a key to be used for encrypting the username and password. CHAP enables the username and password to transmitting in an encrypted form for protection.

In **RAG281/361** , to use CHAP authentication, please follow the procedures.

- 1. Click " " in Auth column.
- 2. Select "CHAP".
- 3. Go to / iSCSI config / CHAP page to create account and password.

/ iSCSI config / Node	/ Change Authentication
Authentication :	None None CHAP
<b>F</b> :	- 2 5 2 4

4. Select "**None**" to disable CHAP.

In **RSG281/361** to use CHAP authentication, please follow the procedures.

- 1. Click " " in Auth column.
- 2. Select "CHAP".
- 3. Go to / iSCSI config / CHAP page to create account and password.

/ iSCSI config / Node	/ Change Authentication
Authentication :	None -
	None
	CHAP

4. Select the checkbox which enabled CHAP.

								User	0	Create	0	Delete	0

user2	

Figure 3.5.5.4

(Figure 3.5.5.4: RSG281/361, create two CHAP accounts named "user1" and "user2". "user1" is enabled by node name " iqn.1997-10.com.enhance-tech:ultrastorRS16(or 8) IP-4-000a6d020:target1")

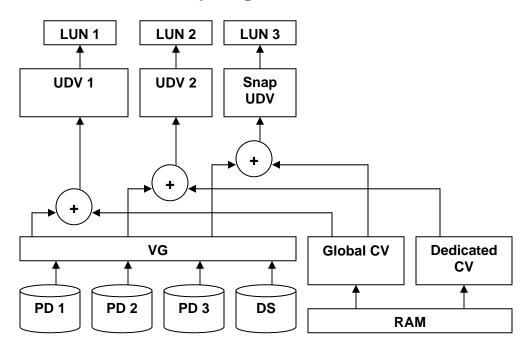

# 3.6 Volume configuration

"Volume config" selection is for the setup of volume configurations including "Physical disk", "Volume group", "User data volume", "Cache volume", and "Logical unit" functions.

<u>Physical disk</u>	Hard disks to store data
<u>Yolume group</u>	Sets of physical disks with RAID functions
<u>User data volume</u>	Slices of volume groups
<u>Cache volume</u>	Dedicated or global cache space for user data volume
<u>Logical unit</u>	Target volumes for hosts access

Figure 3.6.1

## 3.6.1 Volume relationship diagram

The above diagram describes the relationship of RAID components. One VG (Volume Group) consists of a set of UDVs (User Data Volume) and owns one RAID level attribute. Each VG can be divided into several UDVs. The UDVs from one VG share the same RAID level, but may have different volume capacity. Each UDV will be associated with one specific CV (Cache Volume) to execute the data transaction. Each CV could have different cache memory size from user's modification/setting. LUN is the logical volume/unit, which the users could access through SCSI commands.

## 3.6.2 Physical disk

Enter **"Physical disk"** to view the status of hard drives inserted in the system. The following are operation tips:

- 1. Multiple select. Select one or more checkboxes in front of the slot number. Or select the checkbox at the top left corner will select all. Check again will select none.
- The list box will disappear if there is no VG or only VG of RAID 0, JBOD. Because these RAID levels cannot be set as dedicated spare disk.
- 3. These three functions **"Free disks"**, **"Global spares**", **"Dedicated spares**" can do multiple selects, too.
- 4. The operations of the other web pages (e.g.: volume config of VG, UDV, CV, LUN pages) are similar to previous steps.

	Slot	WWN	Size (GB)	¥G name	Status	1	2	Speed
	1	2071001378a8a002	74	VG-R0	Good	🚺 RD		3.0Gb

## 3.6.3 Volume group

Enter "Volume group" to view the status of each volume group.

• VG column description:

						Create •				Delete •
No.	Name	Total (GB)	Free (GB)	#PD	#UDV	Status	1	2	3	RAID
1	VG-R0	297	267	4	1	Online				RAID 0
2	VG-R6	148	128	4	1	Online				RAID 6
						Create •				Delete •

(Figure 3.6.3.1: There is a RAID 0 with 4 physical disks, named "VG-R0", total size is 297GB, free size is 267GB, related to 1 UDV. Another is a RAID 6 with 4 physical disks, named "VG-R6".)

No.	Number of volume group. The button next to the No. is "More Information" indication. It shows the details of the volume group.				
Name	Volume group name. The button next to the Name is " <b>Rename</b> " function.				
Total(GB)	Total capacity of this volume group.				
Free(GB)	Free capacity of this volume group.				
#PD	The number of physical disks of the volume group.				
#UDV	The number of user data volumes related to the volume group.				
Status	The status of volume group. <b>"Online"</b> → volume group is online. <b>"Fail"</b> → volume group is fail.				
Status 1	"DG" → DeGraded mode. This volume group is not completed. The reason could be lack of one disk or failure of disk.				
Status 2	" <b>R</b> " $\rightarrow$ <b>R</b> ebuild. This volume group is doing rebuilding.				
Status 3	"M" → Migration. This volume group is doing migration.				

RAID	The RAID level of the volume group. The button next to the RAID level is "Migrate" function. Click
	to the RAID level is " <b>Migrate</b> " function. Click " <b>Migrate</b> " can add disk(s) to do expansion or change the RAID level of the Volume group.

### • VG operations description:

Create	Create a volume group
Delete	Delete a volume group

## 3.6.4 User data volume

Enter "User data volume" function to view the status of each user data volume.

No.	Name	Size (GB)	Status	1	2	3	R %	RAID	#LUN	Snapshot (GB)	¥G name	CV (MB)
1	UDV-01	30	Online	0 WB	0 HI •			RAID 0	1	9.99/10.00	VG-R0	663
2	UDV-02	20 •	Online	0 WB	HI •	<b>I</b>	46%	RAID 6	1	10.00/10.00	VG-R6	663

(Figure 3.6.4.1: Create a UDV named "UDV-01", related to "VG-R0", size is 30GB, status is online, write back, high priority, related to 1 LUN, with cache volume 663MB, 10GB snapshot (ESnap) space. The other UDV is named "UDV-02", initializing to 46%.

#### • UDV column description:

No.	Number of this user data volume. The button in below to the UDV No. is " <b>More Information</b> " indication. It shows the details of the User data volume.
Name	Name of this user data volume. The button in below to

	the UDV Name is "Rename" function.
Size(GB)	Total capacity of this user data volume. The button in below to the size is " <b>Extend</b> " function.
Status	The status of this user data volume. "Online" → user data volume is online. "Fail" → user data volume is failed.
Status 1	<ul> <li>"WT" → Write Through.</li> <li>"WB" → Write Back.</li> <li>"RO" → Read Only.</li> <li>The button in below to the status1 is "Set read/write mode" function.</li> </ul>
Status 2	<ul> <li>"HI" → HIgh priority.</li> <li>"MD" → MiD priority.</li> <li>"LO" → LOw priority.</li> <li>The button in below to the status2 is "Set Priority" function.</li> </ul>

R %	Ratio of initializing or rebuilding.
RAID	The RAID levels that user data volume is using.
#LUN	Number of LUN(s) that data volume is attaching.
Snapshot (ESnap)(GB)	The user data volume size that used for snapshot (ESnap). The button next to the snapshot (ESnap) is " <b>Resize</b> " function to decide the snapshot (ESnap) space. The button next to the resize function is " <b>Auto snapshot (ESnap)</b> " function to setup the frequency of taking snapshots (ESnap). The number means " <b>Free snapshot (ESnap) space</b> " / " <b>Total snapshot (ESnap) space</b> ". If the snapshot (ESnap) UDV has been created, this column will be the creation time.

QCopy	Remote replication function.
VG name	The VG name of the user data volume.
CV (MB)	The cache volume of the user data volume.

### • UDV operations description:

Attach	Attach to a LUN.
Snapshot	Choose a UDV to execute snapshot (ESnap).
Create	Create a user data volume function.
Delete	Delete a user data volume function.

## 3.6.5 Cache volume

Enter "Cache volume" function to view the status of cache volume.

The global cache volume is a default cache volume, which is created after power on automatically, and cannot be deleted. The size of global cache is based on the RAM size. It is total memory size minus the system usage.

			Create •	Delete •
	No.	Size	UDV na	ame
	1	663	Glob	al
Free : O (MB	3)		1	
			Create •	Delete •
		Figure 3.6.5.1		

• CV column description:

No.	Number of the Cache volume. The button next to the
	CV No. is "More Information" indication. It shows the

	details of the cache volume.
Size(MB)	Total capacity of the cache volume The button next to the CV size is " <b>Resize</b> " function. The CV size can be adjusted.
UDV Name	Name of the UDV.

### • CV operations description:

Create	Create a cache volume function.
Delete	Delete a cache volume function.

If there is no free space for creating a new dedicated cache volume, cut down the global cache size first. After resized, then dedicated cache volume can be created.

**Tips** The minimum size of global cache volume is **40MB**. The minimum size of dedicated cache volume is **20MB**.

# 3.6.6 Logical unit number

Enter "Logical unit" function to view the status of attached logical unit number of each UDV.

User can attach LUN by clicking the "<u>Attach</u>". Please refer to Figure 3.6.6.1. "**Host**" must input an initiator node name for access control, or fill-in wildcard "\*", which means every host can access the volume. Choose LUN number and permission, then click "<u>Confirm</u>". Please refer to Figure 3.6.6.2. User can assign up to 256 LUNs per system (controller). For the host connection, the host number limitation is 32 per system (controller) in the same time, and 8 for single user data volume (UDV) which means 8 hosts can access the same UDV in the same time.

UDV:	UDV-01 (30GB)		
Host :	*		
Target :	iqn.2004-08.tw.com.qsan:p200c-000a6d02	1:target0 💌	
LUN:	-0-		
Permission :	C Read-only 👁 Read-write		
		<< Back	Confirm •

(Figure 3.6.6.1: P200C needs to select "Target" (Multi-node), the other models (Single-node) do not have such selection.

		Atta	ch	0	Deta	ch 🔹
_						
	Host	Target	LUN	Permission	UDV name	#Session
	*	iqn.2004-08.tw.com.qsan:p200c-000a6d021:target0	0	Read write	UDV-01	0
	iqn.1991-05.com.microsoft:demo	all	1	Read write	UDV-02	0
		Atta	ch	0	Deta	ch 🔹

Figure 3.6.6.2

(Figure 3.6.6.2: P200C, UDV-01 is attached to LUN 0 with every host can access. UDV-02 is attached to LUN 1 with only initiator note named "iqn.1991-05.com.microsoft:demo" can access. The other models do not display "Target" column.)

#### • LUN operations description:

Attach	Attach a logical unit number to a user data volume.
Detach	Detach a logical unit number from a user data volume.

The matching rules of access control are from top to down by sequence. For example: there are 2 rules for the same UDV, one is "\*", LUN 0; the other is "iqn.host1", LUN 1. The other host "iqn.host2" can login because it matches the rule 1.

The access will be denied when there is no matching rule.

## 3.6.7 Examples

The followings are examples for creating volumes. Example 1 is to create two UDVs sharing the same CV (global cache volume) and set a global spare disk. Example 2 is to create two UDVs. One shares global cache volume, the other uses dedicated cache volume. Set a dedicated spare disk.

#### • Example 1

Example 1 is to create two UDVs in one VG, each UDV uses global cache volume. Global cache volume is created after system boots up automatically. So, no action is needed to set CV. Then set a global spare disk. The last, delete all of them.

Step 1: Create VG (Volume Group).

To create the volume group, please follow the procedures:

Name :		VG-5										
RAID Lev	el :	RAID 5	-									
RAID PD :	slot :	1234						Sele	ct PD		0	
				Figur	e 3.6.7.	1	<< Back	0			Next >>	•
1.	Sele	ct " <b>/ Volu</b>	me con	fig / Vo	lume	group".						
2. 3. 4.	Click Inpu "		Create Name, t PD •	choose " to c ".	a RA hoose	AID leve	el from AID PD	slo	ot(s)	),	•	ess
	corre		toomo.	1 1000							ootapo	are
5.	Done	e. A VG ha	as been	created	d.							
							Create				Delete	
	No.	Name	Total (GB)	Free (GB)	#PD	#UDV	Status	1	2	з	RAID	
	1	VG-5	114	114	4	0	Online				RAID 5	
							Create				Delete	0

#### Figure 3.6.7.2

(Figure 3.6.7.2: Creating a RAID 5 with 4 physical disks, named "VG-R5". The total size is 114GB. Because of no related UDV there, free size still remains 114GB.)

Step 2: Create UDV (User Data Volume).

To create a data user volume, please follow the procedures.

Name :	UDV-R5-1
VG name :	VG-5 💌
CV No.:	Global (120 MB)
Capacity (GB) :	50
Stripe height (KB) :	64 💌
Block size (B) :	512 💌
Read/Write :	C Write-through cache C Write-back cache
Priority :	High priority     O Middle priority     O Low priority

Figure 3.6.7.3

<< Back •

Confirm o

- 1. Select "/ Volume config / User data volume".
- Create Click " • " 2.
- 3. Input a UDV name, choose a VG Name and input a size to the UDV; decide the stripe high, block size, read/write mode and set priority, Confirm • " finally click "
- Done. A UDV has been created. 4.
- 5. Do one more time to create another UDV.

No.	Name	Size (GB)	Status	1	2	3	R %	RAID	#LUN	Snapshot (GB)	VG name	CV (MB
1	UDV-R5-1	50 •	Online	0 WB	0 HI 0	<b>D</b> I	4%	RAID 5	O	0.00/0.00	VG-5	120
2	UDV-R5-2	64 •	Online	0 WB	HI •	<b>I</b>	0%	RAID 5	О	0.00/0.00	VG-5	120

(Figure 3.6.7.4: Create UDVs named "UDV-R5-1" and "UDV-R5-2", related to "VG-R5", the size of "UDV-R5-1" is 50GB, the size of "UDV-R5-2" is 64GB. The status of these UDVs are online, write back, high priority with cache volume 120MB. "UDV-R5-1" is initialing about 4%. There is no LUN attached.)

Step 3: Attach LUN to UDV.

There are 2 methods to attach LUN to UDV.

- 1. In "/ Volume config / User data volume", press " Attach • "
- 2. In "/ Volume config / Logical unit", press "Attach ".

The procedures are as follows:

UDV:	UDV-R5-1 (50GB)
Host :	*
LUN:	-0-
Permission :	C Read-only @ Read-write

Figure 3.6.7.5

- 1. Select a UDV.
- Input "Host", which is an initiator node name for access control, or fillin wildcard "\*", which means every host can access this volume. Choose LUN and permission, then click "Confirm .".
- 3. Done.

Attach •		ch •	Detach •	
Host	LUN	Permission	UDV name	#Session
*	0	Read write	UDV-R5-1	1 •
ign.1991-05.microsoft.com:demo	1	Read write	UDV-R5-2	0

#### Figure 3.6.7.6

Attach

.

Detach •

(Figure 3.6.7.6: UDV-R5-1 is attached to LUN 0 with any hosts can access. UDV-R5-2 is attached to LUN 1 with only initiator note named "iqn.1991-05.com.microsoft:demo" can access.)

**Tips** The matching rules of access control are from top to down by sequence. Please refer 3.6.6 for details.

#### Step 4: Set global spare disk.

To set global spare disks, please follow the procedures.

- 1. Select "/ Volume config / Physical disk".
- Select the free disk(s) by clicking the checkbox of the row, then click
   " Global spares " to set as global spares.
- 3. There is a "GS" icon shown up at status 1 column.

	- Select - 💌 Fre	e disks 🔹 🔹	Glob	al spares 🔹	Dedicate	d sp	)ares 💿
Slot	WWN	Size (GB)	¥G name	Status	1	2	Speed
1	2007001378a40040	38	VG-R5	Good	🛙 RD		1.5Gb
2	2017001378a202d9	38	VG-R5	Good	🖸 RD		1.5Gb
3	2018001378a202d9	38	VG-R5	Good	🚺 RD		1.5Gb
4	2019001378a202d9	38	VG-R5	Good	🚺 RD		1.5Gb
5	201a001378a202d9	38		Good	🛙 GS		1.5Gb
6	20c4001378000108	38		Good	🖸 FR		1.5Gb

8	201b001378a202d9	38		Good	Ø FR		1.5Gb

Figure 3.6.7.7

(Figure 3.6.7.7: Slot 5 is set as global spare disk.)

**Step 5:** Done. They can be used as iSCSI disks.

Delete UDVs, VG, please follow the steps.

Step 6: Detach LUN from UDV.

In "/ Volume config / Logical unit",

	Host	LUN	Permission	UDV name	#Session
	*	0	Read write	UDV-R5-1	1 •
<b>v</b>	ign.1991-05.microsoft.com:demo	1	Read write	UDV-R5-2	0

- Select LUNs by clicking the checkbox of the row, then click
   "Detach ". There will pop up a confirm page.
- 2. Choose "OK".
- 3. Done.

Step 7: Delete UDV (User Data Volume).

To delete the user data volume, please follow the procedures:

- 1. Select "/ Volume config / User data volume".
- 2. Select UDVs by clicking the checkbox of the row.
- 3. Click "\_\_\_\_\_\_Delete \_\_\_\_". There will pop up a confirm page.
- 4. Choose "OK".

Tips

5. Done. Then, the UDVs are deleted.

When deleting UDV, the attached LUN(s) related to this UDV will be detached automatically, too.

Step 8: Delete VG (Volume Group).

To delete the volume group, please follow the procedures:

- 1. Select "/ Volume config / Volume group".
- 2. Select a VG by clicking the checkbox of the row, make sure that there is no UDV on this VG, or the UDV(s) on this VG must be deleted first.
- 3. Click " Delete ". There will pop up a confirmation page.
- 4. Choose "OK"
- 5. Done. The VG has been deleted.

**Tips** The action of deleting one VG will succeed only when all of the related UDV(s) are deleted in this VG. Otherwise, it will have an error when deleting this VG.

### Step 9: Free global spare disk.

To free global spare disks, please follow the procedures.

- 1. Select "/ Volume config / Physical disk".
- Select the global spare disk by clicking the checkbox of the row, then click "
   Free disks
   " to free disk.

**Step 10:** Done, all volumes have been deleted.

#### • Example 2

Example 2 is to create two UDVs in one VG. One UDV shares global cache volume, the other uses dedicated cache volume. First, dedicated cache volume should be created; it can be used in creating UDV. The last, delete them.

Each UDV is associated with one specific CV (cache volume) to execute the data transaction. Each CV could have different cache memory size. If there is no special request in UDVs, it uses global cache volume. Or user can create a dedicated cache for indivifual UDV manually. Using dedicated cache volume, the performance would not be affected by the other UDV's data access.

The total cache size depends on the RAM size and set all to global cache automatically. To create a dedicated cache volume, first step is to cut down global cache size for the dedicated cache volume. Please follow the procedures.

			Create •	Delete •		
	No.	Size	U	DV name		
	1	40	Global			
	2	20	(Empty)			
Free : 603 (1	ЧВ)					
			Create •	Delete •		

**Step 1:** Create dedicated cache volume.

Figure 3.6.7.9

- 1. Select "/ Volume config / Cache volume".
- If there is no free space for creating a new dedicated cache volume, cut down the global cache size first by clicking the button """ in the size column. After resized, click "Confirm "" to return to cache volume page.
- 3. Click "Create " to enter the setup page.
- 4. Fill in the size and click " Confirm ".
- 5. Done. A new dedicated cache volume has been set.

The minimum size of global cache volume is **40MB**. The minimum size of dedicated cache volume is **20MB**.

Step 2: Create VG (Volume Group).

Tips

Please refer to Step 1 of Example 1 to create VG.

Step 3: Create UDV (User Data Volume).

Please refer to Step 2 of Example 1 to create UDV. To create a data user volume with dedicated cache volume, please follow the below procedures.

Name :	UDV-R5-2
VG name :	VG-5 💌
CV No.:	Dedicated ( 20 MB )
Capacity (GB) :	64
Stripe height (KB) :	64 💌
Block size (B) :	512 🔽
Read/Write :	O Write-through cache O Write-back cache
Priority :	High priority      Middle priority      C Low priority

- 1. Select "/ Volume config / User data volume".
- 2. Click "Create ".
- Input a UDV name, choose a VG Name, select **Dedicated** cache which is created at Step 1, and input the size for the UDV; decide the stripe height, block size, read/write mode and set priority, finally click "Confirm .

No.	Name	Size (GB)	Status	1	2	3	R %	RAID	#LUN	Snapshot (GB)	VG name	C¥ (MB
1	UDV-R5-1	50	Online	0 WB	0 HI 0			RAID 5	1	0.00/0.00	VG-5	40
2	UDV-R5-2	64 •	Online	0 WB	HI 0	<b>I</b>	5%	RAID 5	O	0.00/0.00	VG-5	20

4. Done. A UDV using dedicated cache has been created.

Figure 3.6.7.11

(Figure 3.6.7.11: UDV named "UDV-R5-1" uses global cache volume 40MB, and "UDV-R5-2" uses dedicated cache volume 20MB. "UDV-R5-2" is initialing about 5%.)

No.	Size	UDV name			
1	40	Global			
2	20	UDV-R5-2			

Figure 3.6.7.12

(Figure 3.6.7.12: In "/ Volume config / Cache volume", UDV named "UDV-R5-2" uses dedicated cache volume 20MB.)

Step 4: Attach LUN to UDV.

Please refer to Step 3 of Example 1 to attach LUN.

Step 5: Set dedicated spare disk.

To set dedicated spare disks, please follow the procedures:

- 1. Select "/ Volume config / Physical disk".
- Select a VG from the list box, then select the free disk(s), click
   <u>"Dedicated spares</u> " to set as dedicated spare for the selected VG.
- 3. There is a "DS" icon shown up at status 1 column.

	- Select - 💌 Fre	e disks 🔹 💿	Glob	al spares 🔹	Dedicate	d st	oares 🔹
Slot	WWN	Size (GB)	VG name	Status	1	2	Speed
1	2007001378a40040	38	VG-R5	Good	🖸 RD		1.5Gb
2	2017001378a202d9	38	VG-R5	Good	🖸 RD		1.5Gb
3	2018001378a202d9	38	VG-R5	Good	🖸 RD		1.5Gb
4	2019001378a202d9	38	VG-R5	Good	🖸 RD		1.5Gb
5	201a001378a202d9	38	VG-R5	Good	🛙 DS		1.5Gb
6	20c4001378000108	38		Good	0 FR		1.5Gb
7	201c001378a202d9	38		Good	0 FR		1.5Gb
8	201b001378a202d9	38		Good	🛛 FR		1.5Gb

Figure 3.6.7.13

#### (Figure 3.6.7.13: Slot 5 has been set as dedicated spare disk of VG named "VG-R5".)

Step 6: Done. The PDs can be used as iSCSI disks.

Delete UDVs, VG, please follow the steps.

Step 7: Detach LUN from UDV.

Please refer to Step 6 of Example 1 to detach LUN.

Step 8: Delete UDV (User Data Volume).

Please refer to Step 7 of Example 1 to delete UDV.

Step 9: Delete VG (User Data Volume).

Please refer to Step 8 of Example 1 to delete VG.

Step 10: Free dedicated spare disk.

To free dedicated spare disks, please follow the procedures:

- 1. Select "/ Volume config / Physical disk".
- Select the dedicated spare disk by clicking the checkbox of the row, then click "Free disks • " to free disk.

**Step 11:** Delete dedicated cache volume.

To delete the cache volume, please follow the procedures:

- 1. Select "/ Volume config / Cache volume".
- 2. Select a CV by clicking the checkbox of the row.
- 3. Click " Delete ". There will pop up a confirmation page.
- 4. Choose "OK".
- 5. Done. The CV has been deleted.

**Caution** Global cache volume cannot be deleted.

Step 12: Done, all volumes have been deleted.

# 3.7 Enclosure management

**"Enclosure management"** function allows managing enclosure information including **"SES config"**, **"Hardware monitor"**, **"S.M.A.R.T."** and **"UPS"** functions. For the enclosure management, there are many sensors for different purposes, such as temperature sensors, voltage sensors, hard disks, fan sensors, power sensors, and LED status. And due to the hardware characteristics are different among these sensors, for different sensors, they have different polling intervals. Below is the detail polling time intervals:

- 1. Temperature sensors: 1 minute.
- 2. Voltage sensors: 1 minute.
- 3. Hard disk sensors: 10 minutes.
- 4. Fan sensors: 10 seconds, when there are continuous 3 times of error, controller sends ERROR event log.
- 5. Power sensors: 10 seconds, when there are continuous 3 times of error, controller sends ERROR event log.
- 6. LED status: 10 seconds.

<u>SES config</u>	Access control for SES management
Hardware monitor	System monitored voltage, temperature and battery backup module
S.M.A.R.T.	Self-monitoring analysis and reporting technology for physical disks
UPS	Uninterruptible power supply

Figure 3.7.1

## 3.7.1 SES configuration

**SES** represents **S**CSI Enclosure **S**ervices, one of the enclosure management standards. Enter "**SES config**" function can enable or disable the management of SES.

		_	Enable e	Disable •
Host	LUN	Permission		UDV name
*	0	Read write		(SES)
 			Enable	Disable •

Figure 3.7.1.1

(Figure 3.7.1.1: Enable SES in LUN 0, and can be accessed from every host.)

The SES client software is available at the following web site:

SANtools: http://www.santools.com/

## **3.7.2** Hardware monitor

Enter "Hardware monitor" function to view the information of current voltage and temperature.

closure management / Hardware monitor	
Item	Information
+1.5V:	+1.52 V (min = +1.44 V, max = +1.63 V)
+3.3V:	+3.28 V (min = +3.10 V, max = +3.55 V)
+5V:	+5.02 V (min = +4.80 V, max = +5.35 V)
+12V:	+12.08 V (min = +11.40 V, max = +12.80 V)
+2.5V:	+2.54 V (min = +2.45 V, max = +2.75 V)
PSU +5V(Backplane):	+5.10 V (min = +4.70 V, max = +5.35 V)
PSU +12V(Backplane):	+12.23 V (min = +11.40 V, max = +12.80 V)
PSU +3.3V(Backplane):	+3.31 V (min = +3.10 V, max = +3.55 V)
Daughter Board:	+43.0 (C) (hyst = +0.0 (C), high = +70.0 (C))
PCI-X BRG:	+33.5 (C) (hyst = +0.0 (C), high = +60.0 (C))
Core Processor:	+46.0 (C) (hyst = +0.0 (C), high = +75.0 (C))
Location 1(Backplane):	+29.0 (C) (hyst = +0.0 (C), high = +45.0 (C))
Location 2(Backplane):	+29.0 (C) (hyst = +0.0 (C), high = +45.0 (C))
Location 3(Backplane):	+29.5 (C) (hyst = +0.0 (C), high = +45.0 (C))
PSU1 (Backplane):	good
PSU2 (Backplane):	good
FAN1(Backplane):	good
FAN2(Backplane):	good
FAN3(Backplane):	good

Auto shutdown :

#### Figure 3.7.2.1

If "Auto shutdown" has been checked, the system will shutdown automatically when voltage or temperature is out of the normal range. For better data protection, please check "Auto Shutdown".

For better protection and to avoid single short period of high temperature triggering Auto shutdown, ENHANCE TECH controllers use multiple condition judgments for Auto shutdown, below is the detail of when the Auto shutdown will be triggered.

- 1. There are 3 sensors placed on controllers for temperature checking, on core processor, on PCI-X bridge, and on daughter board. ENHANCE TECH controller will check each sensor every 30 seconds. When one of there sensor is over the high temperature value for continuous 3 minutes, the Auto shutdown will be triggered immediately.
- 2. The core processor temperature limit is 85 °C . The PCI-X bridge temperature limit is 80 °C . The daughter board temperature limit is 80 °C .
- 3. If the high temperature situation doesn't last for 3 minutes, ENHANCE TECH controller will not do auto shutdown.

## 3.7.3 Hard drive S.M.A.R.T. function support

**S.M.A.R.T.** (Self-Monitoring Analysis and Reporting Technology) is a diagnostic tool for hard drives to give advanced warning of drive failures. **S.M.A.R.T.** provides users chances to take actions before possible drive failure.

S.M.A.R.T. measures many attributes of the hard drive all the time and decide the hard drives which are close to out of tolerance. The advanced notice of possible hard drive failure can allow users to back up hard drive or replace the hard drive. This is much better than hard drive crash when it is writing data or rebuilding a failed hard drive.

Enter **"S.M.A.R.T."** function will display S.M.A.R.T. information of hard drives. The number is the current value; the number in parenthesis is the threshold value. The threshold values of hard drive vendors are different, please refer to vendors' specification for details.

S.M.A.R.T. web page is supported on RS8/RS16 IP. RS16 IP-4 do not have this page because S.M.A.R.T. is only defined for SATA disks.

	Deed survey	Calman	Reallocated sector						
Slot	Read error rate	Spin up time	count	Seek error rate	Spin up retries	Calibration retries	Temperature (C)	Status	
1		203(63)	253(63)	253(0)	253(157)	253(223)	41	Good	
2	100(16)	107(24)	100(5)	100(67)	100(60)		31	Good	
3	100(16)	104(24)	100(5)	100(67)	100(60)		32	Good	
4	70(6)	96(0)	100(36)	75(30)	100(97)		31	Good	
5	100(16)	102(24)	100(5)	100(67)	100(60)		32	Good	
6		203(63)	253(63)	253(0)	253(157)	253(223)	28	Good	
7	94(16)	99(24)	100(5)	100(67)	100(60)		31	Good	
8	200(51)	171(21)	200(140)	200(51)	100(51)	100(51)	30	Good	

## 3.7.4 UPS

Enter "UPS" function will set UPS (Uninterruptible Power Supply).

UPS Type :	None
Shutdown Battery Level (%) :	5 💌
Shutdown Delay (s):	0
Shutdown UPS :	OFF 💌
Status :	
Battery Level (%) :	

Figure 3.7.4.1

Confirm •

Currently, the system only support and communicate with smart-UPS function of APC (American Power Conversion Corp.) UPS. Please check detail from <a href="http://www.apc.com/">http://www.apc.com/</a>.

First, connect the system and APC UPS via RS-232 for communication. Then set up the shutdown values when the power is gone. UPS of other vendors can work fine, but they have no such function of communication.

UPS Type	Select UPS Type. Choose Smart-UPS for APC, None for other vendors or no UPS.		
Shutdown Battery Level (%)	When below the setting level, the system will shutdown. Setting level to " <b>0</b> " will disable UPS function.		
Shutdown Delay (s)			
Shutdown UPS	Select ON, when power is gone, UPS will shutdown by itself after the system shutdown successfully. After power comes back, UPS will start working and notify system to boot up. OFF will not.		
Status	The status of UPS. "Detecting" "Running" "Unable to detect UPS" "Communication lost" "UPS reboot in progress" "UPS shutdown in progress"		

	"Batteries failed. Please change them NOW!"
Battery Level (%)	Current percentage of battery level.

# 3.8 System maintenance

"Maintenance" function allows operation of the system functions including "Upgrade" to the latest firmware, "Info" to show the system version, "Reset to default" to reset all controller configuration values to origin settings, "Config import & export" to export and import all controller configuration except for VG/UDV setting and LUN setting, and "Shutdown" to either reboot or shutdown the system.

Upgrade	Remote upload firmware
<u>Info</u>	System information
<u>Reset to default</u>	Reset to factory default
Config import & export	Import/export configurations
<u>Shutdown</u>	Reboot or shutdown system

Figure 3.8.1

## 3.8.1 Upgrade

Enter "**Upgrade**" function to upgrade firmware. Please prepare new firmware file named "**xxxx.bin**" in local hard drive, then press "Browse..." to select the file. Click "Confirm •", it will pop up a message "Upgrade system now? If you want to downgrade to the previous FW later, please export your system config first", click "**Cancel**" to export system config first, then click "**OK**" to start to upgrade firmware.

Browse the firmware to upgrade :	Browse
Export config	

Figure 3.8.1.1

Confirm

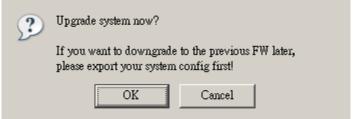

Figure 3.8.1.2

When upgrading, there is a progress bar running. After finished upgrading, the system must reboot manually.

Please contact with Enhance Tech for latest firmware.

## 3.8.2 Info

Enter **"Info"** function will display system information (including firmware version), CPU type, installed system memory, and controller serial number.

## 3.8.3 Reset to default

Enter "**Reset to default**" function, it allows user to reset controller to the factory default setting.

Sure to reset to factory default?

Figure 3.8.3.1

Confirm •

Reset to default sets password to default: **1234**, and set IP address to default as DHCP setting.

Default IP address: 192.168.0.200

Default subnet mask: 255.255.255.0

Default gateway: 192.168.0.1

## 3.8.4 Config import & export

Enter "**Config import & export**" function, it allows user to save system configurable values: export function, and to apply all configuration: import function. For the volume config setting, the values are available in export function and not available in import function which can avoid confliction/date-deleting between two controllers. That says if one controller already has valuable data on the disks and user may forget it, use import function could return to the original config. If the volume setting was also imported, the user's current data will be cleared.

Import/Export :	Import	
Import file :	Import Import Logical unit only Export	Browse
		Confirm

- 1. **Import:** Import all system configurations including volume config.
- 2. Import Logical unit only: No system and volume configurations.
- 3. **Export:** Export all configurations to a file.

#### Caution

Import function will import all system configurations including volume config, the user's current data will be cleared.

## 3.8.5 Shutdown

Enter **"Shutdown"** function; it will display **"Reboot"** and **"Shutdown"** buttons. Before power off, it's better to press "Shutdown" to flush the data from cache to physical disks. The step is better for the data protection.

### Figure 3.8.5.1

# 3.9 Logout

For security reason, **"Logout"** function will allow logout while no user is operating the system. Re-login the system, please enter username and password again.

# Chapter 4 Advanced operation

# 4.1 Rebuild

If one physical disk of the VG which is set as protected RAID level (e.g.: RAID 3, RAID 5, or RAID 6) is FAILED or has been unplugged/removed, then, the VG status is changed to degraded mode, the system will search/detect spare disk to **rebuild** the degraded VG to a complete one. It will detect dedicated spare disk as rebuild disk first, then global spare disk.

**SYNERGY TECH** controllers support Auto-Rebuild function. When the RAID level allows disk failures which the VG is protected, such as RAID 3, RAID 5, RAID 6, and etc, THE controller starts Auto-Rebuild as below scenario:

Take RAID 6 for example:

1. When there is no global spare disk or dedicated spare disk on the system, THE controller will be in degraded mode and wait until (A) there is one disk assigned as spare disk, or (B) the failed disk is removed and replaced with new clean disk, then the Auto-Rebuild starts. The new disk will be a spare disk to the original VG automatically.

a. If the new added disk is not clean (with other VG information), it would be marked as RS (reserved) and the system will not start "auto-rebuild".

b. If this disk is not belonging to any existing VG, it would be FR (Free) disk and the system will start Auto-Rebuild function.

c. if user only removes the failed disk and plugs the same failed disk in the same slot again, the auto-rebuild will start by this case. But rebuilding in the same failed disk may impact customer data later from the unstable disk status. **SYNERGY TECH** suggests all customers not to rebuild in the same failed disk for better data protection.

2. When there is enough global spare disk(s) or dedicated spare disk(s) for the degraded array, THE controller starts Auto-Rebuild immediately. And in RAID 6, if there is another disk failure happening during the time of rebuilding, THE controller will starts the above Auto-Rebuild scenario as well. And the Auto-Rebuild feature only works at "RUNTIME". It will not work the downtime. Thus, it will not conflict with the "Roaming" function.

In degraded mode, the status of VG is "DG".

When rebuilding, the status of PD/VG/UDV is "**R**"; and "**R%**" in UDV will display the ratio in percentage. After complete rebuilding, "**R**" and "**DG**" will disappear. VG will become complete one.

**Tips** The list box doesn't exist if there is no VG or only VG of RAID 0, JBOD. Because user cannot set dedicated spare disk for these RAID levels.

Sometimes, rebuild is called recover; these two have the same meaning. The following table is the relationship between RAID levels and rebuild.

RAID 0	Disk striping. No protection of data. VG fails if any hard drive fails or unplugs.	
RAID 1	Disk mirroring over 2 disks. RAID 1 allows one hard drive fails or unplugging. Need one new hard drive to insert to the system and rebuild to be completed.	
N-way mirror	Extension to RAID 1 level. It has N copies of the disk. N-way mirror allows N-1 hard drives fails or unplugging.	
RAID 3	Striping with parity on the dedicated disk. RAID 3 allows on hard drive fail or unplugging.	
RAID 5	Striping with interspersed parity over the member disks. RAID 5 allows one hard drive fail or unplugging.	
RAID 6	2-dimensional parity protection over the member disks. RAID 6 allows two hard drives fails or unplugging. If it needs to rebuild two hard drives at the same time, it will rebuild the first one, then the other by sequence.	
RAID 0+1	Mirroring of the member RAID 0 volumes. RAID 0+1 allows two hard drives fails or unplugging, but at the same array.	
RAID 10	Striping over the member RAID 1 volumes. RAID 10 allows two hard drives fails or unplugging, but at different arrays.	
RAID 30	Striping over the member RAID 3 volumes. RAID 30 allows two hard drives fails or unplugging, but at different arrays.	

RAID 50	Striping over the member RAID 5 volumes. RAID 50 allows two hard drives fails or unplugging, but at different arrays.
RAID 60	Striping over the member RAID 6 volumes. RAID 40 allows four hard drives fails or unplugging, but each two at different arrays.
JBOD	The abbreviation of " <b>J</b> ust a <b>B</b> unch <b>O</b> f <b>D</b> isks". No protection of data. VG fails if any hard drive fails or unplugs.

## 4.2 VG migration and expansion

To migrate the RAID level, please follow the below procedures. If the VG migrates to the same RAID level of the original VG, it is expansion.

- 1. Select "/ Volume config / Volume group".
- 2. Decide which VG to be migrated, click the button " in the RAID column next the RAID level.
- 3. Change the RAID level by clicking the down arrow mark "RAID 5 ". There will be a pup-up which shows if the HDD is not enough to support the new setting RAID level, click "Select PD " to increase hard drives, then click "Confirm " to go back to setup page. When doing migration to lower RAID level, such as the original RAID level is RAID 6 and user wants to migrate to RAID 0, the controller will evaluate this operation is safe or not, and display "Sure to migrate to a lower protection array?" to give user warning.
- Double check the setting of RAID level and RAID PD slot. If no problem, click "<u>Next >></u>".
- 5. Finally a confirmation page shows detail RAID info. If no problem, click "Confirm • " to start migration. Controller also pops up a message of "Warning: power lost during migration may cause damage of data!" to give user warning. When the power is abnormally off during migration, the data is in high risk.
- Migration starts and it can be seen from the "status 3" of a VG with a running square and an "M". In "/ Volume config / User data volume", it displays an "M" in "Status 4" and complete percentage of migration in "R%".

Name RAID	: Level :	VG-R0 RAID 5	•								
RAID	PD slot :	12345						Sel	ect PD 🔹		
				Fig	gure 4.2	.1	<< Back	0		Next >>	0
/ Volur	ne config / \	/olume group	-		-	-	Create	•		● ● A 参 Delete	•
	No.	Name	Total (GB)	Free (GB)	#PD	#UDV	Status	1	2 3	RAI	D
	1	VG-R0	76	71	3	1	Online		M	RAID	5
							Create	0		Delete	0
				Fig	gure 4.2	.2					

(Figure 4.2.2: A RAID 0 with 2 physical disks migrates to RAID 5 with 3 physical disks.)

		Attach	0	S	inapshot	0		Crea	ate	0	Delete	0
No.	Name	Size (GB)	Status	1	2	3	<b>R</b> %	RAID	#LUN	Snapshot (GB)	VG	CV (MB
1	UDV-R0	5	Online	0 WB •	0 HI 0	D M	12%	RAID 5	0	0.00/0.00		10

#### (Figure 4.2.3: A RAID 0 migrates to RAID 5, complete percentage is 12%.)

To do migration/expansion, the total size of VG must be larger or equal to the original VG. It does not allow expanding the same RAID level with the same hard disks of original VG.

During setting migration, if user doesn't setup correctly, controller will pop up warning messages. Below is the detail of messages.

- 1. Invalid VG ID: Source VG is invalid.
- 2. **Degrade VG not allowed:** Source VG is degraded.
- 3. **Initializing/rebuilding operation's going:** Source VG is initializing or rebuilding.

- 4. **Migration operation's going:** Source VG is already in migration.
- Invalid VG raidcell parameter: Invalid configuration. E.g., New VG's capacity < Old VG's capacity, New VG's stripe size < Old VG's stripe size. Or New VG's configuration == Old VG's configuration.
- 6. **Invalid PD capacity:** New VG's minimum PD capacity < Old VG's minimum PD capacity.

#### Caution

VG Migration cannot be executed during rebuild or UDV extension.

# 4.3 UDV Extension

To extend UDV size, please follow the procedures.

- 1. Select "/ Volume config / User data volume".
- 2. Decide which UDV to be extended, click the button " "" in the Size column next the number.
- 3. Change the size. The size must be larger than the original, and then click "Confirm " to start extension.
- 4. Extension starts. If UDV needs initialization, it will display an "I" in "Status 3" and complete percentage of initialization in "R%".

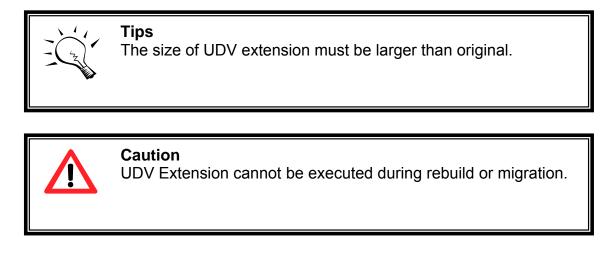

/ Volume config /	User data volume / Extend	_	0	0	0		•	0 0
Size :	10							
Free :	71 (GB)

Figure 4.3.2

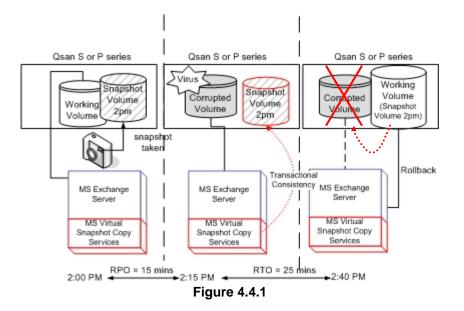

#### (Figure 4.3.2: Extend UDV-R0 from 5GB to 10GB.)

# 4.4 Snapshot (ESnap)/Rollback

**Enhance Tech** Snapshot-on-the-box (ESnap) captures the instant state of data in the target volume in a logical sense. The underlying logic is Copy-on-Write -moving out the to-be-written data to certain location whenever a write action occurs since the time of data capture. The certain location, named as **snap UDV**, is essentially a new UDV, which can be attached to a LUN thus provisioned to a host as a disk just like other ordinary UDVs in the system. **Rollback** function restores the data back to the state of any point in time previously captured for whatever unfortunate reason it might be (e.g. virus attack, data corruption, human errors and so on). Snap UDV is allocated within the same VG in which the snapshot (ESnap) is taken, we suggest to reserve **20%** of VG size or more for snapshot (ESnap) space. Please refer to Figure 4.4.1 for snapshot (ESnap) concept.

RAG281/361, RSG281/361 support snapshot / rollback.

#### Caution

Snapshot (ESnap) / rollback features need **512MB** RAM at least. Please also refer to RAM certification list in Appendix A.

## 4.4.1 Create snapshot (ESnap) volume

To take a snapshot (ESnap) of the data, please follow the procedures.

- 1. Select "/ Volume config / User data volume".
- Choose a UDV to do snapshot (ESnap) by clicking the button " in the "Snapshot (ESnap) (GB)" column, it will direct to a setup page. The maximum snapshot (ESnap) space is 2TB which user can setup the space no bigger than 2048GB.
- 3. Set up the size for snapshot (ESnap). The size is suggested to be 20% of UDV size at least, then click "Confirm . It will go back to the UDV page and the size will show in snapshot (ESnap) column. It may not be the same as the number entered because some is reserved for snapshot (ESnap) internal usage. There will be 2 numbers in "Snapshot (ESnap) (GB)" column. These numbers mean "Free snapshot (ESnap) space" and "Total snapshot (ESnap) space".
- Choose a UDV by clicking the checkbox of the row and then click
   "
- 5. A snapshot (ESnap) UDV is created with the date and time taken snapshot (ESnap) of the chosen UDV. The snapshot (ESnap) UDV

size is the same as the chosen UDV no matter the actual snapshot (ESnap) UDV data occupies.

6. Attach LUN to UDV, please refer to section 3.6.6 Logical unit number for more detail.

		Attach •		Snaps	hot e		C	reate	0	De	elete	0
No.	Name	Size (GB)	Status	1	2	3 R %	RAID	#LUN		pshot <sub>GB)</sub>	VG	<b>CV</b> (MB)
1	UDV-R0	10 ○ ₩₩	Online	0 WB •	HI •		RAID 0	1		0/10.00 ©	VG-R0	100
2	UDV-R-1713	10 。 二時	Online	10 RO	<b>Ю</b> ні		RAID 0	0	02/14	17:13:35 ~	VG-R0	100

7. Done. It can be used as a disk.

(Figure 4.4.1.1: No.1 is a RAID 0 UDV. Set snapshot (ESnap) space to 10GB. And now its space is free to snapshot (ESnap). No.2 is a snap UDV taken on 02/14 17:13:35.)

Snapshot (ESnap) has some constraints as the following:

- 1. Minimum RAM size of enabling snapshot (ESnap) function is **512MB**.
- For performance concern and future rollback, the system saves snapshot (ESnap) with names in sequences. For example: three snapshots (ESnap) has been taken and named "snap1"(first), "snap2" and "snap3"(last). When deleting "snap2", both of "snap1" and "snap2" will be deleted because "snap1" are related to "snap2".
- 3. For resource concern, the max number of snapshots (ESnap) is **32**.
- 4. If snapshot (ESnap) space is full, controller will send a warning message about space full and the new taken snapshot (ESnap) will replace the oldest snapshot (ESnap) by rotation sequence.
- 5. Snap UDV cannot be migrated, when doing migration of related VG, snap UDV will fail.
- 6. Snap UDV cannot be extended.

## 4.4.2 Auto snapshot (ESnap)

The snapshot (ESnap) copies can be taken manually or by schedule such as hourly or daily. Please follow the procedures.

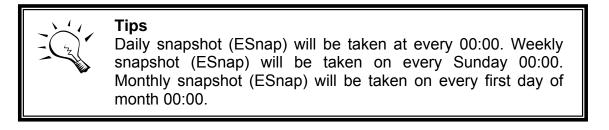

1. Select "/ Volume config / User data volume".

- 2. Create a snapshot (ESnap) space. Please refer to section 4.4.1 for more detail.
- 3. Click " <sup>(C)</sup>" in **"Snapshot (ESnap) (GB)"** column to set auto snapshot (ESnap).
- 4. The auto snapshot (ESnap) can be set at the period of monthly, weekly, daily, or hourly.
- 5. Done. It will take snapshots (ESnap) automatically.

/ Volume config / User data volu	me / Auto Snapshot		0 ( 6 E		<ul><li>○</li><li>☆</li></ul>	<ul><li>○</li><li>○</li></ul>

Figure 4.4.2.1

(Figure 4.4.2.1: It will take snapshots (ESnap) every month, and keep the last 32 snapshot (ESnap) copies.)

#### 4.4.3 Rollback

The data in snapshot (ESnap) UDV can rollback to original UDV. Please follow the procedures.

- 1. Select "/ Volume config / User data volume".
- 2. Take one or more snapshots (ESnap). Please refer to section 4.4.1 for more detail.
- 3. Click "**Snapshot (ESnap) (GB)**" column to rollback the data, which user can recover data to the time that snapshot (ESnap) is taken.

Rollback function has some constraints as described in the following:

- 1. Minimum RAM size of enabling rollback function is **512MB**.
- 2. When doing rollback, the original UDV cannot be accessed for a while. At the same time, the system connects original UDV and snap UDV, and then starts rollback.
- 3. During rollback data from snap UDV to original UDV, the original UDV can be accessed and the data in it just like it finished rollback. At the same time, the other related snap UDV(s) can not be accessed.
- 4. After rollback process finished, the other related snap UDV(s) will be deleted, and snapshot (ESnap) space will be set to **0**.

#### Caution

Before executing rollback, it is better to dismount file system for flushing data from cache to disks in OS first. The controller also sends pop-up message when user checks rollback function.

# 4.5 QCopy remote replication

**SYNERGY TECH** QCopy service is to build a proprietary replication mechanism for created UDVs. It will copy the logical user volume data exactly to the remote place. The QCopy is built-in service without any host-based application for the data replication and it has easy configuration setup from web UIs. The first QCopy version supports copy from one snapshot (ESnap) UDVs of the source device to the remote target device.

QCopy supports 2 copying tasks in the system which user can setup QCopy to 2 snapshot (ESnap) UDVs for replication at the same time. The target device capacity needs to be greater or equal to the source capacity. (The target UDV capacity is equal or larger than the source UDV capacity.)

To do a QCopy task, please follow the below steps:

1. Take snapshot (ESnap) on the source UDV, for detail setup steps of snapshot (ESnap), please refer to section 4.4.1. When setup UDV block

size, please set 512B for the block size. The QCopy now supports 512B block size only.

- 2. Click QCopy icon "
- 3. Input the remote iSCSI target IP, Click "<u>Next >> •</u>", and wait for a while, when webui recieves the target UDV information and corresponding LUN
- 4. Select remote target LUN of the target UDV which is for QCopy, Click "Confirm ", then there will be a pop-up window to ask user to dismount the target UDV from host/server first. This dismount step is to avoid any data inconsistence from others. After the target UDV is dismounted from host/server, then click "Yes" for confirmation.
- 5. When the QCopy is processing data, on the **\Volume config\User data volume** status colume, there will be an indicator " for QCopy and completed percertage.
- 6. The source system will issue one "INFO" event describes the replication setting.
- 7. If the replication has been completed successfully, the source system will issue one "INFO" event describes the replication started at what time and completed at what time.
- 8. The source system will try to reconect the target system when there is any network error or unstable transferring. And if the replication has been stopped for some interrupts, the source system will issue one "WARNING" event describes the possibility of the interrupts to stop the replication. The possibility to stop the replication may be "network link failure", "the target system not reachable", "connection fail", and etc.
- 9. When the causes to the interrupts have been removed, the users can manually activate the QCopy replication again to restart the replication work. The source system will issue one "INFO" event describes the replication has been resumed.

When the QCopy is completed, user can delete the LUN of the source UDV for avoiding wrong operation or deleting data. When recovery is needed, the operation steps are the same as replication steps, user only needs to setup the QCopy service from target system in reversely.

QCopy is only supported by RAG281/361 only.

(Figure 4.5.5: QCopy is copying, and the completed percentage it 4%)

Enhance Remote Replication supports **512B block size** only for both source and target side.

## Caution

Before executing Enhance Remote Replication, it is better to dismount target file system for avoiding any inconsistent data IO. The controller also send pop-up message when user

# 4.6 Disk roaming

Physical disks can be re-sequenced in the same system or move whole physical disks from system-1 to system-2. This is called disk roaming. Disk roaming has some constraints as described in the following:

- 1. Check the firmware of two systems first. It is better that both have same firmware version or newer.
- 2. Whole physical disks of related VG should be moved from system-1 to system-2 together. The configuration of both VG and UDV will be kept but LUN configuration will be cleared to avoid conflict with system-2.

# 4.7 Support Microsoft MPIO and MC/S

MPIO (Multi-Path Input/Output) and MC/S (Multiple Connections per Session) both use multiple physical paths to create logical "paths" between the server and the storage device. In the case which one or more of these components fails, causing the path to fail, multi-path logic uses an alternate path for I/O so that applications can still access their data.

Microsoft iSCSI initiator supports multi-path function. Please follow the procedures to use MPIO feature.

- 1. A host with dual LAN ports connects cables to **RAG281/361**, **RSG281/361** series controller.
- 2. Create a VG/UDV, attach this UDV to the host.
- 3. When installing "**Microsoft iSCSI initiator**", please install MPIO driver at the same time.
- 4. Logon to target separately on each port. When logon to target, check "Enable multi-path". Please refer to Appendix D, step 6.
- 5. MPIO mode can be selected on Targets  $\rightarrow$  Details  $\rightarrow$  Devices  $\rightarrow$  Advanced.
- 6. Rescan disk.
- 7. There will be one disk running MPIO.

For detailed setup steps, please refer to Appendix F: MPIO and MC/S setup instructions. MC/S setup steps are very similar to MPIO, please also refer to Appendix: F.

## • iSCSI Initiator (Software)

OS	Software/Release Number		
Microsoft Windows	Microsoft iSCSI Software Initiator Version 2.04		
	System Requirements:		
	1. Windows XP Professional with SP2		
	2. Windows 2000 Server with SP4		
	3. Windows Server 2003 with SP1		
	4. Windows Server 2003 R2		
Linux	The iSCSI Initiators are different for different Linux Kernels.		
	1. For Red Hat Enterprise Linux 3 (Kernel 2.4), install linux-iscsi- 3.6.3.tar		
	2. For Red Hat Enterprise Linux 4 (Kernel 2.6), use the build-in iSCSI initiator iscsi-initiator-utils-4.0.3.0-4 in kernel 2.6.9		
	<ol> <li>For Red Hat Enterprise Linux 5 (Kernel 2.6), use the build-in iSCSI initiator iscsi-initiator-utils-6.2.0.695-0.7.e15 in kernel 2.6.18</li> </ol>		
Mac	ATTO XTEND 2.0x SAN / Mac iSCSI Initiator		
	System Requirements:		
	1. Mac® OS X v10.3.5 or later		

For ATTO initiator, it is not free. Please contact your local distributor for ATTO initiator.

#### • iSCSI HBA card

## C. Known issues

1. Microsoft MPIO is not supported on Windows XP or Windows 2000 Professional.

**Workaround solution:** Using Windows Server 2003 or Windows 2000 server to run MPIO.

# D. Microsoft iSCSI Initiator

Here is the step by step to setup Microsoft iSCSI Initiator. Please visit Microsoft website for latest iSCSI initiator. The following setup may not use the latest Microsoft iSCSI initiator.

- 1. Run Microsoft iSCSI Initiator version 2.03. Please see Figure D.1.
- 2. Click "**Discovery**".

iSCSI Initiator Properties	×
General Discovery Targets Persistent Targets Bound V	olumes/Devices
The iSCSI protocol uses the following information to identify this initiator and authenticate targets.	o uniquely
Initiator Node Name: iqn.1991-05.com.microsoft:demo	
To rename the initiator node, click Change.	<u>C</u> hange
To authenticate targets using CHAP, click Secret to specify a CHAP secret.	Secret
To configure IPSec Tunnel Mode addresses, click Tunnel.	<u>T</u> unnel
OK Cancel	

Figure D.1

3. Click "**Add**". Input IP address or DNS name of iSCSI storage device. Please see Figure D.2.

Type the IP address or DNS nam want to add. Click Advanced to s session to the portal.		
IP address or DNS name:	Port:	
192.168.11.229	3260	<u>A</u> dvanced

4. Click "**OK**". Please see Figure D.3.

	ess 68.11.229	Port 3 3260	Adapter Default	IP A Defa	ddress ault
	Add		<u>R</u> emove	R <u>e</u> frest	n
jSNS S Name	ervers —				
Name					

Figure D.3

5. Click "**Targets**". Please see Figure D.4.

Figure D.4

6. Click "Log On". Please see Figure D.5. Check "Enable multi-path" if running MPIO.

Figure D.5

7. Click "**Advance...**" if CHAP information is needed. Please see Figure D.6.

Local adapter:

Session Connections					
To configure how the connection this session are load balanced,			Co	nnections	1
Connections.					
		1	ncel	APP	ly.

#### Figure D.8

- 2. Check the Identifier, which will be deleted.
- 3. Click "Log off".
- 4. Done, the iSCSI device log off successfully.

## E. Trunking/LACP setup instructions

Here is the step by step to setup Trunking and LACP. There are 2 kinds of scenarios for Trunking/LACP. Please see Figure E.1.

The setup instructions are in the following figures.

1. Create a VG with RAID 5, using 3 HDDs.

Volun	ne config / V	olume group	-	-	-	-	-	(())	<b>0</b>	0	<ul> <li>●</li> <li>●</li></ul>	00
							Create	0			Delete	0
	No.	Name	Total (GB)	Free (GB)	#PD	#UDV	Status		1 2	3	RAII	5
	1	R5 •	76	76	3	0	Online				RAID	
						_	Create	0			Delete	0
				Fig	ure E.2							

2. Create a UDV by using the RAID 5 VG.

/ Vol	lume coi	nfig / User o	lata volume	-					-	0	<b>0</b>	<mark>○ (</mark>	)   %	0 0
-1			Attach	0	Sn	apshot	0		Creat	e e		De	lete	0
	No.	Name	Size	Status	1	2	3	<b>R</b> %	RAID	#LUN	Snap (G	shot <sup>B)</sup>	VG	CV (MB)
	1	R5 •	10 ● <b>苯</b> ₩	Online	0 WB •	0 HI 0	D I	14%	RAID 5	0	0.00/		R5	
			Attach	0	Sr	apshot	0		Creat	e o		De	lete	0
					Fig	jure E.	3							

3. Run Microsoft iSCSI initiator 2.03 and check the Initiator Node Name.

iSCSI Initiator Properties	×
General Discovery Targets Persistent Targets Bound Volumes/Dev	vices
The iSCSI protocol uses the following information to uniquely identify this initiator and authenticate targets.	
Initiator Node Name: iqn.1991-05.com.microsoft:qa-chrischou3	
To rename the initiator node, click Change.	
To authenticate targets using CHAP, click Secret to Specify a CHAP secret.	
To configure IPSec Tunnel Mode addresses, clickunnel	
OK Cancel	y

Figure E.4

4. Attaching LUN to R5 UDV. Input the Initiator Node Name in the Host field.

/ Volume config / Lo	ogical unit / Attach	_	0	0	0	<b>○</b> ⊰	•	<b>0</b>
UDV :	R5 (10GB) 💟							
Host :	iqn.1991-05.com.microsoft:demo							
LUN:	- 0 -							
Permission :	O Read-only							
2		<< Back			(	Confi	rm	0

Figure E.5

5. Done, please check the settings.

/ Volume config / Logical unit											
			Attach	0	Detach 🔹						
	Host	LUN	Permission	UDV name	#Session						
	iqn.1991-05.com.microsoft:demo	0	Read write	R5	1 <u>Session</u>						
			Attach	•	Detach 🔹						

6. Check iSCSI settings. The IP address of iSCSI data port 1 is 192.168.11.229. Using port 1 as Trunking or LACP. Click the blue square in "Aggregation" field to set Trunking or LACP.

/ 5	ystem (	config / iSCSI				_	<b>0</b>	
						iSNS	•	Authentication •
No.	Port	Aggregation	DHCP	IP address	Netmask	Gateway	мти	MAC address
1	LAN1	no Colmen	no	192.168.11.229	255.255.255.0	192.168.11.229	1500	00:13:78:00:02:00
2	LAN2	no	no	192.168.12.229	255.255.255.0	192.168.12.254	1500 •	00:13:78:00:02:01
Enti	ty name	e :	iqn.2004	-08.tw.com.qsan:p	120c-000a00021			
						iSNS	0	Authentication

Figure E.7

7. Select "Trunking". If LACP is needed, please see Figure E.12.

/ Syste	em config / iSCSI / A	ggregation	_	-		0	0	<b>○</b> ≩	<b>•</b>	<b>0</b> Ø
LAN1	Aggregation :	O Multi-homed Trunking O LACP								
0				<< Back	0		9	Confi	rm	0
			Figure E.8							

8. Now, the setting is in Trunking mode.

/ S	ystem	config / iSCSI				iSNS	•	<ul> <li>↓ ▲ ↔ Ø</li> <li>Authentication •</li> </ul>
No.	Port	Aggregation	DHCP	IP address	Netmask	Gateway	мти	MAC address

22. Run "**Device Manage**" in Windows. Make sure MPIO device is available. Then the disk can be tested performance by IOMETER.

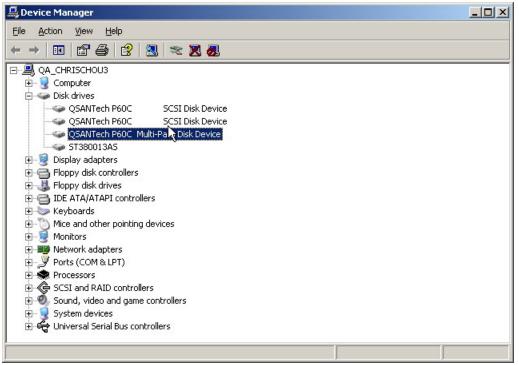

Figure F.23

The **MC/S** setup instructions are very similar to MPIO, detail steps are in the following figures. For the target side setting, the steps are exactly the same as MPIO. Please refer to **Figure F.1 to Figure F.9**.

- 1. Create a VG with RAID 5, using 3 HDDs.
- 2. Create a UDV by using RAID 5 VG.
- 3. Run Microsoft iSCSI initiator 2.03 and check the Initiator Node Name.
- 4. Attaching LUN to R5 UDV. Input the Initiator Node Name in Host field.
- 5. The volume config setting is done.
- 6. Check iSCSI settings. The IP address of iSCSI data port 1 is 192.168.11.229, port 2 is 192.168.12.229 for example.
- 7. Add Target Portals on Microsoft iSCSI initiator 2.03.
- 8. Input the IP address of iSCSI data port 1 (192.168.11.229 as mentioned in previous pages). For MC/S, there is only ONE "**Target Portals**" in the "**Discovery**" tab.

# H. Installation Steps for Large Volume (TB)

## Introduction:

**Synergy Tech** controllers are capable to support large volumes (>2TB) on all product lines. When connecting controllers to 64bit OS installed host/server, the host/server is inherently capable for large volumes from the 64bit address. On the other side, if the host/server is installed with 32bit OS, user has to change the block size to 1KB, 2KB or 4KB to support volumes up to 4TB, 8TB or 16TB, for the 32bit host/server is not LBA (Logical Block Addressing) 64bit supported. For detail installation steps, please check below.

## Step A: configure your target

1. Go to **/ Volume config / Volume group**, create a VG.

						Create	0		D	elete	•
No.	Name	Total (GB)	Free (GB)	#PD	#UDV	Status	1	2	3	RAID	ı.
						Create	0		D	elete	

Figure H.1

2. Choose RAID level and disks.

Name :	VG01	
RAID Level :	RAID 6	
RAID PD slot :	9 10 11 12 13 14 15 16	Select PD
		<< Back • Next >> •

Figure H.2

3. Confirm VG settings.

Create VG01 :	RAID 6			
RAID width :	8			
RAID copy :	1			
RAID row :	1			
RAID PD slot :	9 10 11 12 13 14 15 16			

4. A RAID 6 VG is created.

		Total	Free						_		
No.	Name	(GB)	(GB)	#PD	#UDV	Status	1	2	3	RAID	
	VG01	2793	2793	8	0	Online				RAID 6	

5. Go to / Volume config / User data volume, create a UDV

				,	Atta	ch	0	Cre	ate •	Dele	ete o
No.	Name	Size (GB)	Status	1	2	3	<b>R</b> %	RAID	#LUN	VG name	С <b>V</b> (МВ)
				,	Atta	ch	0	ethy Cre	ate o	Dele	ete o

Figure H.5

6. Setup capacity, stripe height, and block size for UDV.

/ Volume config / User	· data volume / Create	(III)	6	H	ł
Name :	UDV01				
VG name :	VG01 💌				
C¥ No.:	Global ( 136 MB ) 💌				
Capacity (GB) :	2793 I				
Stripe height (KB) :	64 💌				
Block size (B) :	512 💌				
Read/Write :	C Write-through cache . Write-back cache				
Priority :	• High priority • Middle priority • Low priority				

Figure H.6

#### Tips

When the OS is 64bit, user can set the block size to any available value. If the OS is 32bit, user must change the block size to larger values than 512B. There will be a confirmation pop-up when UDV size is over 2TB for reminding.

<< Back 

Confirm

Microsof	it Internet Explorer
?	LBA 64 support? Choose OK if using OS such as Windows 64 bits, Windows Server 2003 SP1, Linux kernel 2.6.x, FreeBSD 5.2.1 or latter. Choose Cancel. It will change the sector size to 4K. The maximum capacity is up to 16 TB. This volume can not be Dynamic Disk.
	Cancel Figure H.7:

(Figure H.7: choose "OK" for 64bit OS, choose "Cancel" for 32bit OS, this step will change block size to 4K automatically.)

## 7. A 2.793TB UDV is created.

#### (Figure H.12: Left: P series; Right: S series attach LUN.)

#### Step B: configure your host/server

- For S Series controller (SCSI), the host/server side may need reboot or setup SCSI HBA BIOS to make volumes available. Please refer to your SCSI HBA manual for more detail. For P Series (iSCSI), user needs to setup software iscsi initiator or iSCSI HBA first.
- 2. Below is the configuration for Windows Server 2003 R2 with Microsoft iscsi initiator. Please install the latest Microsoft iscsi initiator from below link.

http://www.microsoft.com/downloads/details.aspx?FamilyID=12cb3c1a-15d6-4585-b385-befd1319f825&DisplayLang=en

iSCSI Initiator Properties 🔀	iSCSI Initiator Properties
General Discovery Targets Persistent Targets Bound Volumes/Devices	Add Target Portal
The iSCSI protocol uses the following information to uniquely identify this initiator and authenticate targets.	Type the IP address or DNS name and socket number of the portal you want to add. Click Advanced to select specific settings for the discovery session to the portal.
Initiator Node Name: ign.1991-05.com.microsoft:demo	IP address or DNS name: Port:
*	192.168.11.229 3260 <u>A</u> dvanced
To rename the initiator node, click Change.       Change         To authenticate targets using CHAP, click Secret to specify a CHAP secret.       Secret         To configure IPSec Tunnel Mode addresses, click       Iunnel         Tunnel.       Iunnel	OK Cancel
OK Apply	OK Cancel Apply
