The Aluminum Extruded frame door has a 63% perforated open area and are used when high ventilation and cooling is required. These doors have a very nice aesthetic appearance with a rounded frame to match the enclosure frame radius

The Aluminum Extruded Frame door is made of 6063 T5 aluminum extrusion and have a 63% open perforated insert for excellent ventilation, lockable swing handle latch, and lift off hinges. The doors open 180 degrees and more and come with left hand hinges as a default. Right Hand hinges can be installed at time of assembly upon request or field reversible when right hand hinges are supplied.
